WeatherAction forecast (issued Dec 2) for severe winter storms USA & Canada 19-31 Dec dramatically confirmed

Notably dangerous warning for 28-30 Dec remains in force

- Likely worst hit to be: MidWest, Great Lakes, Central & NE USA
- Short range Met Maps now show developing Northerly blast 28 Dec but **it will be more severe than standard meteorology expects**

Piers Corbyn astrophysicist of WeatherAction long range weather & climate forecasters said Xmas eve: "Our long range forecast of a series of **notably severe & at times dangerous deluges of snow/blizzards, hail and winter thunder/tornadoes** in USA /Canada 19-31 Dec is being excellently confirmed.

"We warned these storms would be *likely to exceed the expectations of standard Meteorology*. In the first sub-period 19-20 Dec blizzards hit Eastern USA shattering a 1932 Dec snowfall record, with 16 inches (40 cm) of snow in one of the biggest snowstorms to hit Washington since records began in 1885.

The 22-23 Dec period saw another hit of deluges and now, 24/25 Dec (start of 25-27), a "**humongous**" **ICY winter storm** is spreading across US Midwest affecting holiday travel & power-outing hundreds of homes -

<http://www.heralddeparis.com/humongous-storm-hits-us-midwest-2/68114>

"As we predicted these storms have been dangerous but 28-30 Dec – which is a 'TopA' Solar Weather Impact period (as bad as the TopA SWIP 17-19 Nov which saw world wide extreme storms and parts of USA & Canada severely thrashed*) is **likley to be even worse in terms of total effect**" said Piers as he listed the main US vulnerable areas according to his upgraded Solar Weather Technique forecast procedure SWT25E. (*see www.weatheraction.com WAnews Nos 88-90)

Piers added "Our WeatherAction Red Warnings (for significant Solar Weather Impact periods such as these) are independent of forecast details. Even if events turn out to be different from our long range forecast our Solar Weather Technique can still improve short range meteorology forecasts. Red Warnings enable users to know when rain will become more intense; and snow more intense.

"Weather Action extreme event forecasts depend entirely on predictable aspects of solar particle & magnetic activity & are nothing to do with CO2. Yet Governments around the world spout the lie that extreme weather events are driven by man-made CO2 and so refuse to use our forecasts which can help save lives. Until governments, the political classes & their agents in the media & weather business admit the total failure of their CO2 theory which has become a religion, they will continue to fail the public. CO2 Global Warming/Climate Change is failed science based on fraudulent data. Believing in it is causing chaos, suffering and deaths. It's past a joke, it's deadly dangerous and is holding back the world economic recovery. It must be swept away".

Winter storms Warnings issued Dec2

19th – 31st December a series of waves of severe and at times dangerous wintry weather in USA & CANADA

From around 19th there may be a **series of Sudden (polar) Stratospheric Warmings (timing unsure) or a continuing Stratospheric Warming** the consequences of which are to make the jet stream thrash about and give high temperature contrasts and whacks of very cold air at times in Canada & USA and **severe deluges of snow/blizzards, hail & winter thunder / tornadoes at times** – exceeding the expectations of standard meteorology from a day or two ahead.

The region of heavy snow and extreme events at times is wide including very cold blasts in Canada and to the South potentially Arizona/Colorado/New Mexico and most parts of Central / MidWest USA

Main periods

19-20 Dec Major SWIP & Deluges / extreme activity
22-23 Dec Major SWIP & Deluges/ extreme activity
25-27 Dec Moderate SWIP & deluges/ extreme activity
28-30 Dec VERY MAJOR cold blasts & snowstorms / extreme activity
- TopA SWIP with notable simultaneous extreme events around the world.

- Forecast including other parts of world in same periods
