Iceland volcano powers-up!

WeatherAction warnings of volcano AND wind changes confirmed

"The volcano eruption in Iceland has strengthened and a new ash cloud is spreading south and east towards the UK," said the Air Traffic Services Nats later on Monday 19th April.

This updated the UK MetOffice statement that eruptions had weakened (early 19th) and confirmed Piers Corbyn's WeatherAction warning of increased risk of new eruptions of Iceland's volcano and earthquakes in his newly forecasted Solar-Lunar Impact Period 18th-24th April announced on 17th & repeated on SunTalkRadio on 19th {<http://bit.ly/9pmTJF> 12.25pm about 80% through the show }

Piers said "We are very pleased with this confirmation of our forecast. It generally speaking means extra dust risk but the precise implications depend both on the detailed mechanics of the eruptions and wind directions. **Very importantly we predicted on 17th March that the last 5 days of April would see high pressure decisively dominate Europe and give winds from the South/SouthEast which are going to clear the ash from Europe, Britain & Ireland (see map). We also correctly identified the immediately preceding developments towards this situation which will start some clearance.**

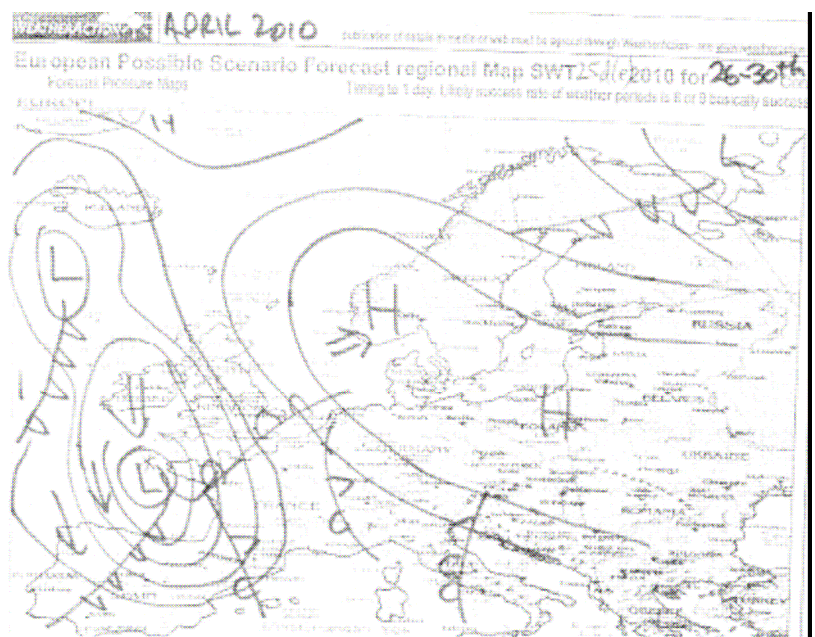

"Some politicians have been saying 'no-one could have seen these developments'. This of course is not true and comes notably from self-styled 'new' poseurs who – along with the other Parties – do not want to admit these things are predictable and are controlled by solar-magnetic & lunar factors and NOTHING to do with CO2. As long as politicians continue to put dogma before evidence-based science the public will suffer unnecessary

And Earthquakes...

“There are also be signs of increased earthquake activity around 18th-24th April such as an M=6.2 quake in Papua New Guinea on 17th at 23.15hrs but we need to wait till after 24th for a fuller measure of relative activity in this period. These are interesting times”, said Piers.

“If the Government took our long range – months ahead - forecasts of important Weather situations (and volcano/earthquake risk) we could make them free to the public and the BBC”, said Piers. “Surely this is a no-brainer. The Met Office can’t do it but we can.

“However Minister Benn like all the major parties ignore letters and forecasts from WeatherAction - putting Global Warming dogma before duty to serve the public. I urge people to lobby their politicians & the BBC on this during this election campaign. Loads of people want to see our detailed forecasts on TV”.

Earthquakes Volcanoes & Solar Activity

• Solar-Lunar triggering
of major events

• **18-24 April new DANGER
for quakes, volcanoes &
weather**

Piers Corbyn, astrophysicist of WeatherAction.com long range weather & climate forecasters today announced important findings connecting solar-lunar effects on earthquakes and volcanoes and warned that the major solar explosion (Coronal Mass Ejection) of 13th April will **increase risk of: more earthquakes, renewed eruption of Iceland’s volcano & extreme weather events world-wide as it hits Earth in his predicted Solar-Lunar Impact periods 18-24 April.** The fact that long periods of low solar activity – such as over the last two years, correspond to more extreme earthquake, volcano (& weather) events is well-know (<http://bit.ly/91913x>), but now, said Piers, we have made new advances:

- Probably the odd to even solar cycle minima (eg cycle 23 to 24 as now) are more dangerous; and
- Within such long quieter periods the biggest earthquake & volcano events are triggered by extra solar activity in certain newly understood PREDICTABLE types of Weather Action Solar Lunar Impact periods (SLIPs) - some related to our Solar Weather Impact Periods SWIPs.

“Possible reasons for the apparent contradictory quake triggering by strong solar events in longer quiet periods has been discussed before (<http://bit.ly/cDmd2>) but whatever is really going on our new findings are:

- 25 of the 26 quakes at level M_a4.0 which occurred 1st Jan to 15th April 2010 coincided with our predicted SW(L)IPS &/or New or Full moons. (17 would be chance result).
- All 6 of the biggest quakes (M_a7.0) occurred in our “Special Sharp Alpha” SLIP windows and the very largest (the Chile M=8.8) was also helped by the Full Moon.

“The timely giant CME on the Sun is delivering (from its flank) the main excitations for our long-ahead predicted SWIPs of 18-19 April and Sharp Alpha SWIP (SLIP) 21-24 April. **The general winds dumping ash clouds into Ireland, Britain & Europe airspaces will continue until the last 5 days of April when there will be a notable wind shift.**

“The **EXTREME WEATHER** event impacts first predicted on April 4 have already been further spelt-out after the CME which took place April 13 <http://bit.ly/cZRLNH>. We have a number of **trial** enhanced risk periods for more quakes (Q-SLIPs) to come but after 18-24 April another especially significant major Q-SLIP is probably 18-21 May.

South Iceland’s Eyjafjallajökull (ay-yah-FYAH-plah-yer-kub-duh) volcano eruption 14th April - New Moon, spewing ash over Europe.

The Major Earthquake (M= 6.9) which hit Qinghai Province NW China 13th April near New Moon also coincided with a major Coronal Mass Ejection the main impact of which – (USA NOAA) will start 18-19 April – a WeatherAction long predicted Red Weather Warning & Major Solar Weather Impact Period (SWIP): <http://bit.ly/cZRLNH>

The Gigantic Chile Earthquake (M=8.8) offshore Maule Chile Feb 27 (day after M=7.0 Ryukyu Japan quake) struck in a special Weather Action “Sharp Alpha SWIP” & very close to full Moon Feb 28.
