Cruel winter to continue in UK & N Hemisphere through Jan AND Feb warns WeatherAction

Blizzards on 2nd Jan 2010 on the M62 motorway near Ripponden, W Yorks, England Photo GETT Telegraph. Meanwhile 30 people are stranded in Yorkshire Dales for 2 days – (BBC video) <http://tinyurl.com/yigy3b7> . Both confirm WeatherAction's long range warning of blizzards espec in North/East 1st-3rd Jan.

- **North hemisphere reverting to cold winters of the '60s**
- **Britain, Ireland, Europe & much of N hemisphere could be in coldest 6 winters in 100 years. Road salt will run out in UK.**
- **Bitter cold Icy blasts and snow deluges will continue in Britain, Ireland, Europe, Russia, North China, Korea, Canada & USA through most of January & February warns WeatherAction**

Piers Corbyn astrophysicist of WeatherAction long range weather & climate forecasters today extended his New Year's Eve warning of continuing cold weather in Britain, Ireland and Holland to now include a **detailed forecast of extremes for USA (see below)** & description of trends in most of the North hemisphere.

"The cold and often snowy weather now gripping the USA, Britain, Ireland and Europe will continue through most of January & February in most of the N Hemisphere above 30deg North. There will be some milder breaks but these will be rather short" said Piers.

Prolonged cold spells driven by solar – magnetic activity

"The weather will come in prolonged spells of repetitive waves of similar cold types. The cause is the particular sun-earth magnetic and particle activity state now defining the Sun-Earth relationship. Our Solar Weather Technique (version SWT25E) shows that there will be relatively little variety in weather types through January & February and what we get will be monotonously cold with few breaks and the jet stream (the track of low pressure centres) will be mostly well south of normal. In some respects aspects of the cold and snowy winters of the 60's are back, however overall it will not be as cruel as 1962/63 which was the coldest since 1739/40".

"This cold weather is not directly because we are in a period of relatively low solar activity. There will be renewed solar activity in the coming 60 days but we are at the start of an EVEN sun-spot cycle (number 24) which are generally colder than odd cycles even when there are lots of sunspots. Other factors also come into play – such as lunar effects; but CO2 is **not** one of them. The theory of man-made CO2 driven Global Warming & climate change is failed science based on fraudulent data and it has no forecasting power or value", he said.

"This winter marks the end of any credibility in the theory of man-made CO2 driven Climate Change of global warming zealots; and the beginning of continuing general decline in world temperatures which will stay below recent levels for at least 100 years (6). Honest greens who want to defend nature's bounteousness had best bail out now or they will get dragged down with the fraudsters.

"The recent superb article by Richard North in the Daily Mail (1) points out the continuing failure of the Met Office's season ahead forecasts and their role as a main propagandist for man-made climate change casts doubt on their competence and impartiality. The Met Office loudly claim the UK in 2009 was the 14th warmest since 1914 (2) without highlighting the key fact that the UK and world are now in a cooling trend (*even using their own suspect data*). The fact it has been warm

recently (even if not as warm as they claim) proves nothing about cause particularly since **CO2 is rising rapidly while world temperatures are falling**. The Met Office also claiming that 2010 could be the warmest on record (3). It beggars belief that they make these brazen claims while their foundation is now shown to be based on fraudulent 'cherry-picking' of data exposed by ClimateGate revelations and in which they are implicated [see (1), (4), (5) & (7)]" said Piers.

Met Office, BBC & brainwashing Press challenged

"Since the main world standard temperature series is based on fraudulent data and the Met Office has been accused of improper practices by the Russians [as reported in the Daily Express (5)] one must question the recent figures and forecasts they produce for the UK and the world. It is absurd that the Met Office is both involved in making the Global Warmist forecasts desired by politicians - who shovel £millions of taxpayers money into their 'climate research'; and are involved in producing the data to 'test' these same 'forecasts'! **It reminds one of bankers triple A rating their own financial derivative products even whilst those were being questioned as fraud. It's time the BBC, Independent, Guardian, New Scientist and New York Times - for example - stop this baseless CO2-Climate Change brainwashing**".

"As far as WeatherAction and other genuine evidence-based science practitioners are concerned (see video (6)) the University of East Anglia (CRU) 'world standard' data is provenly fraudulent and unreliable and only satellite data over the last decade or so has any credibility. If the Met Office wants to make any pronouncements they must use satellite data the collection of which is independent of the University of East Anglia and is supervised by organisations independent of the Met Office", said Piers.

WeatherAction HEADLINE forecast for USA & South CANADA Jan 2010 AND NOTES on Feb 2010

General developments forecast highlighting extreme events:

USA & South Canada in Jan and Feb 2010 will have continuing unusually cold snowy / icy weather with a series of blizzards / snow deluges and ice storms (dates in full forecast).

There will be few breaks in the generally much colder and snowier than normal theme through both months, although the South will be milder at times giving thaw floods.

Full forecasts for Britain & Ireland or USA (via World extremes box): <http://www.weatheraction.com/member.asp>

Climate Change Policy costs lives

"ALL the predictions of CO2-based Global Warming / Climate Change 'Theory' since 2000 have failed as has the pretence of standard meteorology to do long range forecasting. The world is cooling while CO2 is rising, there have been less damaging storms not more and all the other alarmist claims of the *Global Warmers* have been shown to be untrue

(see <http://tinyurl.com/y9alboe> & John Coleman founder of the Weather Channel <http://tinyurl.com/ydj63hf>

The lesson of 2009 for Global Warming Policy is that it must stop. The lesson of 2009 for solar based long-range forecasting (the SWT*) is that it works - as has been demonstrated dramatically on many occasions especially for extreme weather events. **The simultaneity of world weather extreme events is incomprehensible to standard meteorology but follows naturally from the SWT, which can also predict extreme weather events from many months ahead**

STOP use of fraudulent data! - SIGN Downing St Petition!

<http://petitions.number10.gov.uk/UEACRU/>

'We the undersigned petition the Prime Minister to suspend the Climate Research Unit at the University of East Anglia from preparation of any Government Climate Statistics until the various allegations have been fully investigated by an independent body.'
