

Mid June Deluges & Floods USA & Europe predicted in long range by Piers Corbyn of WeatherAction. Extreme deluges and dangerous floods will continue in USA and Europe at *predictable* times for at least two months.

“These extreme weather events are predicable months ahead and are entirely caused by special events on the Sun and changing sun-earth magnetic links in the new solar cycle,” said Piers Corbyn of WeatherAction long range forecasters 15th June as his long range extreme weather warnings were dramatically confirmed in USA and Europe to within a day.

“There will be more very extreme deluges and deadly floods in USA and Europe and other parts of the world for another two months and we will issue predictions for many of them. These extreme rains and floods are nothing whatsoever to do with CO2 or so-called man-made climate change and the public should not be misled by politically motivated false claims. **These events are being predicted and the authorities should issue official warnings and prepare for them, and not mislead the public about false cause.**

Residents flee to rooftops as devastating floods follow 10inches rain Oklahoma 14 June
