What will this winter be like?

Piers Corbyn, astrophysicist, says:-

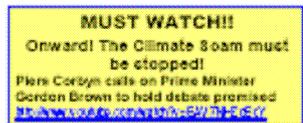

- Don't listen to *fools & charlatans*
- Only Weather Action long range forecasts are reliable

• **AND Offers WeatherAction winter forecast free to the public & authorities if a media sponsor comes forward**

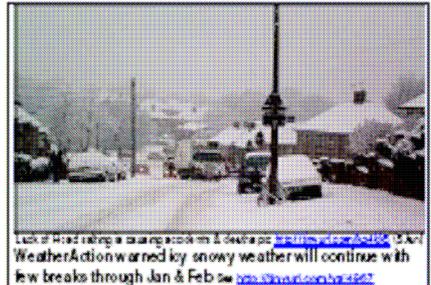

Piers Corbyn astrophysicist of WeatherAction.com solar-based long-range forecasters today (4th Oct), responded to questions about the coming winter by warning against media and authorities listening to 'fools, hype-mongers and charlatans', and said **he would make WeatherAction's winter forecast available free to the public and Authorities if a sponsor comes forward**, and assured present and future users that advance purchasers would still keep a considerable advantage.

Remember last winter –

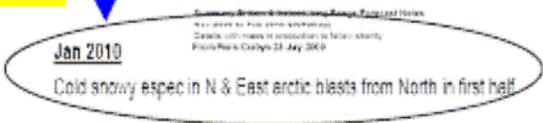

WeatherAction got it right in detail when others failed abysmally and road salt ran out with consequential unnecessary road accidents and deaths –

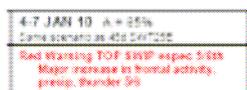

It's not a cold
SNAP -
It will go
ON & ON

It was predicted
by WeatherAction
6 months ago

with
DETAILED TIMING of Snow & blizzards prod later

For full report see <http://www.weatheraction.com/docs/WANews10No3.pdf>

He said the recent Positive Weather Solutions forecast of a coming cold winter should be ignored absolutely because PWS have no proven significant long-range skill and the summer was of the OPPOSITE nature to their forecast of 'probably the hottest ever summer in the UK' – see <http://www.dailymail.co.uk/news/article-1259685/UK-hottest-summer-predicts-Positive-Weather-Solutions.html> . On the other hand our WeatherAction forecast for a lousy summer was very well confirmed – Refs (3) & (2).

“Our statement today is NOT a hint that the winter might in fact be the opposite to what others say. **We are saying nothing**”, Piers made clear. “For **all** the notably different from normal seasons in the last 4 years we have succeeded where others failed and **we issued free public advisories which have been ignored by Government and Authorities** and which can lose us income in unsold forecasts. This absurdity has to stop. Weather for some is an entertainment business but application of misguided forecasts or ignoring reliable warnings can be deadly.

“Let's get Real, for our long range forecasts compared with the Met Office over the last 5 extreme seasons the score is **5 to nil**; and for the short public track record of PWS – ie the summer just gone - the score is **1 to nil**.

BBC put hype, spin and ideology before public safety, scientific integrity and saving lives

“Our specific long-range warnings of floods in summers 2007, 2008 and 2009 (refs 6 & 7) were ignored and our specific public warnings of ice and snow and that the UK would run out of road salt in winters 08/09 and 09/10 (Ref 4) were ignored. Instead the Govt and authorities listened to global warmist Met Office forecasts which depend on fraudulent data and which have failed totally and as a consequence **the UK and Europe ran out of road salt and many unnecessary accidents and deaths occurred.**”

“The BBC (Roger Harrabin) was publicly given key aspects of our winter forecast at our conference in Imperial College on Oct 28th 2009 (Video - ref 5 & 4) but BBC warned no-one and after the winter the BBC ignored our general and detailed success, instead quoting an American much less-detailed forecast for a cold European winter.

“We can also forecast important jet-stream shifts and for example predicted the West Russian heatwave in summer and its end along with the final burst and end of Pakistan super-deluges (Ref 1). Yet the global warmers are going around the world claiming it was down to CO2. This is a lie; they have no basis for their claims.

“The problem we have is that Governments and Local Authorities and the United Nations are more willing to see people die of extreme weather events than undermine their failed ideology of CO2 driven climate change and extreme weather”, said Piers
