

The 4th Jan Eclipse and UK VAT rise; Queensland floods; Monster blizzards and supercold USA UK & Europe; and the BBC -Met Office Goebbels-esque pact.

The partial solar eclipse of 4th Jan was marked by UK Value Added Tax being hiked to its highest level ever, Queensland floods near peaking and the UK Met Office claiming to a bizarre BBC fanfare that they had secretly predicted the supercold December winter in Britain even though their web site carried a mild prediction! Such Goebbels-esque cover-up of failure is matched only by the New York Times doublethink claim that the monster blizzard there was caused by Global Warming!

The **facts** are that both the monster blizzard and the supercold UK December were predicted in LONG RANGE by Piers Corbyn's *Solar Lunar Action Technique* (SLAT) weeks & months before Global Warmist ideologues and their media even knew they had a problem.

The fact is the UK VAT rise would not be necessary if politicians drop the failed ideology of man-made climate change.

Rejection of the failed pseudo-science of CO2 man-made climate change would save the UK £18 billion per year – £5bn more than the VAT hike grab by the exchequer!

The BBC the next day carried predictable one sided psycho-weather- babble like 'Don't worry Goebbels Warming is real and we confidently predict that this year and next might turn less or more extreme and more or less or err *there will still be weather.*'

No attempt to ask those who have answers!! Is this news reportage or brainwashing? pto

Partial eclipse 4th Jan 2011 with spacecraft crossing sun's face <http://on.msnbc.com/eyFbRt>
Near peak flood Rockhampton Queensland. Marker shows other peaks 1991, 1954 & 1918

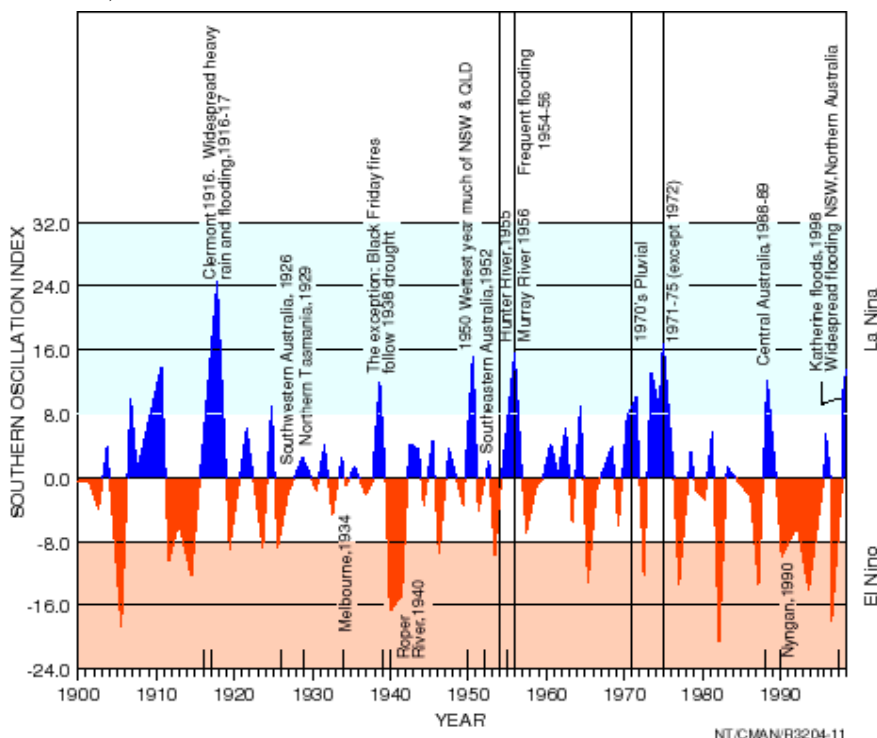

Major flood years (or near years) 2011, 1992, 1973, 1954 & 1916 were all in the same phase of the eclipse cycle

- All had solar eclipses around 4th Jan &/or lunar eclipses a fortnight before / after.

Ironically the BBC and fellow warmists CNN carried clues to some of what is helping drive the present world weather extremes. There are a lot of floods in Queensland but the flood level record post at Rockhampton, SE Queensland shown on CNN and BBC carries dates 1991, 1954 and 1918 for other very major (and bigger – *Shucks bang goes another BBC 'biggest ever due to....' innuendo scare*) floods. A further look at the records shows these dates were near other serious flood dates and there were also very serious floods in Australia in some significant intermediate years and provides a list of major peak floods around 1916/18, 1954, 1973, 1991/1992 and 2011. See <http://notrickszone.com/> for marked graph here and information on 'Southern Oscillation Index'.

Piers Corbyn, astrophysicist of WeatherAction says "The Australian floods show a combination of Southern Oscillation Index signal (opposite to El Nino) – which is solar driven – and the eclipse cycle period of 19,000 years. It's not clockwork but the ongoing lunar interaction with the solar wind in or close to the years for which there are solar eclipses on Jan 4th/5th &/or lunar eclipses a fortnight before / after is a vital factor in the jet stream blocking which helped cause these massive flood events.

"Solar-magnetic and lunar beats pace Pacific and USA temperatures. It is also largely PREDICTABLE jet stream blocking in either hemisphere which **caused** the extreme events which we warned last June would beset the world for some time. We predicted the Russian heatwave and its ending – and the simultaneous ending of the Pakistan superfloods in August 2010, the extreme cold spells in Britain & Europe in December 2010 when we against all others predicted* the coldest December for 100 years and our New York monster blizzard to the day. **The claim that CO2 drives extreme weather is a lie. Will the Global Warmers now claim that eclipses accompanying the advent of floods and blizzards were caused by man-made CO2!?** Politicians, please get real. The CO2 hypothesis of man-made climate change is completely discredited politically driven nonsense based on failed science and falsified* data and is collapsing into a cult which relies on Gore/Goebbels-esque propaganda. It's time now to say NO to all carbon reduction scams such as carbon taxes, carbon trading, windfarms and the energy price hikes which pay for them.

2011 - Another year of weather extremes warns Piers

"Solar-lunar driven major jet stream blocking will continue through January and the whole of 2011 giving more extreme cold and snowy / blizzard spells in parts of USA, Britain and Europe though January continuing into February and then not the sort of Spring and Summer the warmists want.

"The warmists will fail and fail again to predict what is coming and are now writing scripts to deceive the public into believing that *cold is warm* by showing you "data" which has had 62% of recording station* they didn't like removed. "It was disgraceful to see Dr Liz Bentley of The Royal Meteorological Society mouthing warmist apologist inanities on BBC news 24 on 5th Jan. I am a member of or have been associated with the RMS since schooldays and I know a lot of members don't agree with this propaganda and don't recall ever been asked if the RMS should promote it."
