

**Extracts from Piers Corbyn's headline forecast issued Feb 2011**

## Britain & Ireland Sept 2011 to Feb 2012

First Summary issued 7 Feb 2011

The Autumn starts cool and wet with severe gales at times and after **September Probably very wet in with local floods.**

The '30day' Sept forecast issued 31 Aug which had same content as '45d' fc issued mid Aug →

# Storms hitting Britain forecast 7 months ahead by WeatherAction

The storms and deluges hitting Britain and Ireland around 7-10 Sept were predicted by Piers Corbyn of WeatherAction 7 months ahead.

He also predicted the formation timing and track of Hurricane Irene in USA, the remnants of which are part of these gales and thunderstorms, in detail 85 days ahead, <http://bit.ly/puvNX3>.

Piers Corbyn twitpic / [www.weatheraction.com](http://www.weatheraction.com) 22-08-11 WeatherAction News 2011 No 12

**Hurricane Irene hitting Bahamas & East USA confirms in detail - to the day - WeatherAction 85 day ahead forecast.**

- Weather Action warned of East USA grazing Hurricane - as in real time.
- Weather Action 2011 whole Season Atlantic Region Tropical Storms forecast "fantastic accuracy" continuing.

**HURRICANE IRENE** - as now developing in detail 22-26 August 2011:

"We knew the timing of the solar-driven hit for Britain before Irene formed. We also knew 12 weeks ahead pretty exactly what Irene was going to do to the USA. The solar events and effects came on time and dramatically but I hadn't realized this coincides with Irene's arrival here putting them all in the same act!

### Double whammy of Irene remnants and solar action.

Irene crossing the Atlantic with perfect timing was like magic", said Piers.

"Britain & Ireland is getting a double whammy - of Irene remnants and the impact of 50million volt proton bursts on solar wind <http://bit.ly/p3lkdm>. Of course it makes sense through our Solar-Lunar Action theory which enables these predictions. THIS holds that solar-magnetic-particle effects and Lunar modulations DRIVE the whole world's weather and climate machine - like a 4 dimensional cosmic jig-saw"

### Solving the solar-lunar-terrestrial cosmic jig-saw"

"Finding bits which join up along with gigantic events on the sun also happening around 6/7<sup>th</sup> Sept is tremendous. Once pieces of a jig-saw start to join up the whole takes on new meaning. Our work is game-changing - a new paradigm in sun-earth relations, weather and climate is beginning."

**Can you afford to not know where weather will go??**

**WeatherAction on Line forecast Shop <http://bit.ly/dNhiNo>**

- UK+Ireland • Euromaps • USA (Extremes &c) maps
- Tropical Storms • Extremes world quakes + tornadoes

5/6 - 11 SEPTEMBER 2011 AB = 80%

Becoming very wet and windy especially 7-10<sup>th</sup>. One inch of rain in places. Local floods. Mild then cooler around 11th. Cloudy. Shipping and travel disrupted.

Severe gales / stormforce at sea / coast in NW

Thundery deluges windy/tormy. Floods, hail, tornado events likely. Widespread gale severe gales / storm force worst in Ire and NW Britain

**Winds:** Westerly/cyclonic in North/central parts, strong/gale. Becoming NW'ly strong, mod in South England.

**Temps:** Mild, cooler later.

**Sky:** Thick cloud, brighter NW later.

**Solar Factors:**

**7-10<sup>th</sup> Extra Top Red, otherwise NSF**

More intense precip/thunder than standard forecasts expect from 1 day ahead 7-10<sup>th</sup>.

**Likely possible weather map scenario:**

Deep Low pressure crosses Scotland / just North of Scotland and heads into North Sea / Denmark.

## BUT newspapers quote charlatans!

The Express <http://bit.ly/r44niv> maybe didn't know that I predicted the deluges months ahead "but it's still annoying", said Piers, "that they quote Jonathan Powell of opinion-based Positive Weather Solutions as *FOREcasting* them, and a whole lot more".

Is this the same Jonathan Powell of PWS who predicted on 22 March in THE RIVAL newspaper that Britain was this year likely to have it's 'hottest ever' summer <http://bit.ly/bgpiD5>? Express, next time someone 'deserts' THE RIVAL paper perhaps ask them why?
