Before and after! The EF4 Super tornado struck St Louis Missouri Good Friday 22 April <http://bit.ly/g3vAre>

WeatherAction Simultaneous double whammy tornado and earthquake success.

- **Good Friday tornado swarm USA *and* Massive earthquake Solomon Isles confirm WeatherAction simultaneous double hit:**
- **‘Extra Top’ Red Weather Warning *and* World major Earthquake risk period**

WeatherAction’s **Extra Top Red Warning period of 22-23rd April** for tornados in USA <http://bit.ly/gnCOhY> and other extreme weather and our **World major Earthquake Risk period 19-23rd April** were together confirmed by a swarm of tornados in USA including an EF4 super tornado in St Louis and a massive M6.9 earthquake in the Solomon Isles South Pacific within hours - <http://bit.ly/gHfHOR> - (04:17z GMT on 23rd which was 22nd 23:17z CDT USA; WeatherAction forecasts are framed in GMT = UTC).

- **“Extreme weather and major earthquakes in the same family”, says Piers**

Piers Corbyn said “These events were preceded by Solar flare action on the Sun and special Sun-earth magnetic links. We are very pleased with this result which, together with further tornado events on 26-27th April, brings **total confirmation (7/7) of our extreme events forecasted periods for the USA in April and a complete (3/3) success rate for our major earthquake risk trial forecasts since they began in March.** These results further confirm our finding that extreme weather events and Earthquakes are in the same family* - and we can predict both. We will press on with advancing forecasting science for both.”
