***And even the Sun came out!....And they drove off in the Sun in an open-topped Aston-Martin! – Pic outside Buckingham Palace 29<sup>th</sup> April***

## **WeatherAction Royal Wedding forecast 28 days ahead beats Met Office 2 days ahead - '*Good to perfect*' we said and '*Good to perfect*' it was, says Piers**

- "And even the sun came out..." reported world TV media as Royal newly weds Kate and William sped in their carriage from Westminster Abbey down The Mall to Buckingham Palace at about 1:20pm BST and a bright sky with bursts of gentle sunshine blessed the crowd for their two kisses on the Palace balcony, the superb iconic flypasts by the Royal Air force around 1.30pm and the afternoon of general euphoria and well-wishing. *There was not a drop of rain or brolly in sight* and it got sunnier in the afternoon enabling the new bride and groom to leave the Palace in an open-topped Aston Martin\* in perfect sunny weather - *no heavy thundery showers!*

\* For fuller reportage of the event of which the Queen said "It's amazing"  
see <http://www.chron.com/disp/story.mpl/ap/top/all/7543140.html>

"So", said Piers Corbyn of WeatherAction.com long range forecasters: "*Our WeatherAction long range forecast for the wedding weather in London issued 28 days ahead on April 1st was more accurate than the MetOffice's foreboding heavy and thundery rain and gloom issued 2 days ahead.*"

## **'Good to perfect' we said and 'Good to perfect' it was...continued**

"We said (80% confidence) - from 28 days ahead - the weather for the event itself would probably be 'good to perfect' although there would be showers around in South England particularly on the preceding and following days mainly to the West.

"The Met Office had forecast heavy and prolonged thundery showers overnight and advised people to take an umbrella 'just in case' for the Westminster / Palace celebrations.

**"As it turned out the Met Office's heavy and prolonged rain didn't happen before the event, during the ceremony and crucial processions or later in the afternoon and for the key events in London it was dry and bright or gently sunny and then very fine and warmer than the Met Office said.**

**"That is fairly described as 'good' weather becoming pretty well 'perfect' later. Ours was a better forecast than the Met Office.** Of course no forecast can be totally exact but the Met Office was 'way out'.

The usual churlish sad followers of their weather and climate dogma and failed science will come up with their weasel words and say we were just lucky. To that I would point out we cannot be 'just lucky' for all the past major extreme summers and winters over the last 4 years which we correctly forecasted while the Met Office consistently forecasted the opposite of what took place.

"I would also draw attention to the series of weather extreme events including deadly terrifying tornadoes in the USA this April ALL of which - in seven out of seven narrow time windows - we predicted down to within a day from weeks ahead.

"The Met Office approach to forecasting, which ignores external driving factors from solar activity and relies on failed science can never advance any further however much taxpayers money they waste on computers. **Taxpayer's money is better spent on Royal Weddings than Met Office computers.**"

**"Following this success WeatherAction will soon make weekend wedding forecasts for the UK & Ireland available at low charge up to 6 months ahead", he added.**

In internal discussions at WeatherAction Piers, 36hr ahead, (80% confidence in original forecast) said that the frontal attacks from the East would be less active than Met Office said and noted that [Spaceweather.com](http://Spaceweather.com) has a solar wind hit on 30th / 1st May NOT 29th. The Consequence of which will be (in this case) the main (eg England) weather hit will be later on 30th and into May1st.

**Met Office Forecast for Royal wedding VIDEO\*** issued 12:40 GMT (13:40UK) Wed 27 April forecast for 29th - Bright Spells risk of showers - Maybe heavy and thundery on Frid 29th

\* The link to that video has been changed to a link to a later forecast but notes on it:

Early downpours late Thurs 28th afternoon & early evening, overnight and early morning heavy and prolonged Frid 29th Bright Spells risk of showers. **Maybe heavy and thundery.**

Westminster: 10am dry in his picture and partly broken cloud but risk of showers in comment.

Mid-late morning probably dry but "Showers could well be hit and miss - **Take an umbrella** just in case"

2pm 18C. Rain Could well be heavy thundery showers in afternoon.

**Piers Corbyn's VIDEO issued April 1st with statement of Royal Wedding weather forecast AND What about the summer? - comments. See <http://bit.ly/ghPuJA> NOTE**  
WeatherAction issued THIS one forecast and one forecast only for the Royal wedding. The Met Office had about 6 forecasts and they were all wrong or inadequate except the last one of only hours ahead.
