

Europe June 2012 - Public headline summary

Inside:- 8 pages of Euromaps regional detail & timing in 8 periods through June

For full forecast please visit <http://www.weatheraction.com/wactmember5.asp>

A month of dramatic contrasts across Europe and rapid stark changes

- Extreme heatwave continues E/SE Europe / Ukraine
- Northerly blasts at times in N/W Europe / N Sea
- Major thunderstorms, damaging large hail & tornadoes
- Two dramatic rapid warming events of N/W parts.
- Large Jet Stream swings but overall South of Normal.

Greenland High 'Little Ice Age type' extensions to Iceland and North Atlantic / Britain-Ireland with Lows in Central Europe tend to make stark W/NW – E/SE temperature contrasts.

This NW block is likely broken by two powerful (R5 SLAT8) solar driven events this month giving very warm spells / heatwaves involving Azores High extension and / or Scandinavian Highs.

- 'Little Ice-Age' type SE extension of Greenland High is mirrored by more 'Jet Stream South / Split jet' Biscay type Lows especially later in June which will likely cause major thunderstorms hail & tornadic events in Spain and France.

The changes in circulation will be driven by changes in the Solar-Lunar factors which govern the behavior of the Jet stream and major Earthquake (trial) risk and are predictable by WeatherAction's Solar Lunar Action Technique months ahead. **Standard warmist Meteorology which denies the new reality of the pre new LIA world will – like last month - run into serious problems this June** especially around WeatherAction's main Red warning periods (R4 and R5) during which short range forecasts of standard Meteorology precipitation amounts will need to be doubled and **hail / tornadic events are likely to get to near record levels or go 'off scale' at times.**

Weather Action Europe May contrasts superbly confirmed

WeatherAction's long range May forecast well captured the main very cold N/W and very warm/heatwave E/SE contrast which Piers Corbyn warned of mid-April and which a gaggle of churlish standard Meteorologists derided. They went eerily quiet for three weeks as their short-range forecasts failed again and again while Piers' single long range forecast stunned thousands. Joe Bastardi one of the best known meteorologists in USA, who like Piers practices a proper evidence-based approach to climate and forecasting science, tweeted maps above 14 May with comment: **"@Piers Corbyn gotta be smiling at this, UKMET office gotta be dreading it! Should mean Piers is right on May in UK pic.twitter.com/pmyc6VEg"**

In capturing this dramatic weather pattern which was so important for agriculture WeatherAction forecast also hit its target of at least 6/8 correct weather periods each month. The forecast went wrong on 22nd as NW parts of Europe switched to a surprise hotspell. Piers said "We got tremendous congrats for our *'fantastically useful'* warning to farmers and we hit our targets".

Unsurprisingly standard meteorology camp-followers who cannot reliably forecast anything a week ahead and don't apply their churlish 'standards' to themselves "cherry-missed" 85% of Piers' forecast detail and declared his forecast 'wrong' because the warm-up which they also didn't foresee raised the month average away from Piers' estimate!

Would they have passed Meteorology exams under that approach?! These same 'experts' expect the public to PAY £Millions for another super-computer to get wrong answers quicker! Unbelievable!

....then late May West Europe surprise heat shows forecast advance to SLAT8!

Piers reports: "Unlike those who refuse to learn we have already got a better grip on dramatic weather shifts associated with the run-in to the new 'Little Ice Age', advanced our Technique to SLAT8 and updated our JUNE forecast with it. See <http://bit.ly/JU4rRH>
