

# Now they want to rob us £42million to get it wrong quicker!

WeatherAction predicted Earth-Facing major Coronal Hole 4-5 June - part of events which triggered world-wide deluges & storms <http://bit.ly/N8fIVh>

**Met Office want £42,000,000 for new supercomputer; WeatherAction can warn 95% of major UK storms for £351**

Simple application of **WeatherAction public top Red warning forecasts** could have warned the public of severe floods in Wales and England early June while the UK Met Office continues to fail the nation.

Piers Corbyn, astrophysicist and founder of WeatherAction.com long range forecasters said "Our solar-driven Top Red Warnings rule that *whatever we or any forecaster has got right or wrong about a weather pattern then as reality comes into view any precipitation the Met Office computers predict with 12 to 24 hrs to go must be at least doubled and winds upped.* As *Metro* pointed out on 11 June **over twice as much rain fell** in Wales and many other places than the MO feeble yellow alert suggested. We had a **top 'R5' Red warning** within the 5-8<sup>th</sup> June period followed by an 'R3' to 'keep it bad'. This turned a 3 inch deluge threat into a **6 inch torrent and major flood certainty** to follow. Morrisons Aberystwyth became a sunken Noah's Ark, riverside homes at Llandre were swamped and many other parts of the UK and Ireland were badly deluged or flooded". See <http://bit.ly/NqdZKA>

The UK MO backed by deluded MPs want £42M spent over 3 years\* to '*deliver extreme weather warnings*' by upping their computer *game* whilst WeatherAction's charge for 3 years of publicly available, *now*, detailed advanced warnings of when MetOffice forecasts require serious modification is just £351 (for Red Warnings / 'Extreme events Rest of World' via <http://bit.ly/utWrvj>) \*<http://bit.ly/w3ETJj>

## Call Global Cooling Deniers to account!

Piers said: "We score 95% success for our 'Solar factors' changes to TV forecasts of potential major storms. We warned when snow/snow showers forecast by UK MO for Scotland in recent winters would turn into economy-halting blizzards. The nationalist Scottish Government however doesn't want to know and prefers to take instructions from the *English* dominated UK MO and carry on building prayer wheels (wind farms) in the name of so-called CO2 Global warming which is an implicit part of the UK MO failed approach and the economy-ruining 'Green' policies of the Coalition Govt and EU. Standard meteorology has reached its peak and no amount of extra computing power can overcome its limits anymore than £42 million spent on improving candles could make a light-bulb or laser beam. Standard meteorology's prime assumptions that weather and climate are dictated by previous weather and climate plus CO2 is delusional nonsense. Recent and long past CO2 changes have no observed affect at all on weather or climate. Extreme weather events and climate changes start with magnetic and particle action 93million miles away on the sun which change the Jet stream. We show this daily in our forecasts which beat all-comers from months ahead. The Met Office/MPs application is theft in the name of failed science and must be stopped. A faster Met Office computer will just give wrong answers quicker! Instead we need accountable policies using evidence-based science. The major weather extremes in recent months and years are part of the approach to a new 'Little Ice Age' (LIA) like which struck in the early 1800s (the 'Dalton Minimum' of solar activity), or the late 1600s (The 'Maunder Minimum') The BBC-MO now admit the Jet stream has been shifting South a lot; as it did during 'Little Ice Ages', but they refuse to join up the dots. **The world is cooling** however much the BBC-MO twist data and hide reality."
