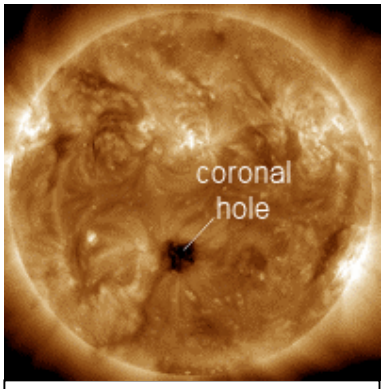
Storms & quakes confirm top Red warning ~Jan 11-13 (*Report 1*)

- **Solar coronal action and quakes suggest 11-13th top ('R5') WeatherAction Red warning period coming one day early.**
- **Standard Meteorology changing 1 & 2 day ahead forecasts towards WeatherAction 12 weeks ahead forecast.**



Coronal Hole Jan9 http://bit.ly/yM7s6L - implies (under PiersC's SLAT) main solar-Earth effect Jan10 to Jan13/14

Storm events USA & UK which were specifically forecast by WeatherAction in long range and new major earthquakes around trial dates predicted are confirming WeatherAction's top level ('R5') Red warning ~11-13 Jan (one day uncertainty).

"The well placed coronal hole on Jan 9th (pic right) suggests, under our Solar Lunar Action Technique, **major** Earth effects from ~10th for a few days. The massive **M7.3** quake event on 10th 18:37 UTC off Sumatra, Indian Ocean (http://bit.ly/AfIamf & http://on.doi.gov/yg1E9L) supports that view. This puts our 'R5' 11-13th weather extreme and major Quake-Volcano (trial) period probably coming 10-13th, a day early, as did our previous period (R4) right, http://bit.ly/xLiVTM ", said Piers Corbyn astrophysicist of WeatherAction.com .

TV & Met O forecasts underestimating winds ~10-13th.
- See also Report2 later

"We warned that standard meteorology would underestimate our specific stormy weather type of events forecast for USA and UK ~10-13th (espec 11-13) and that is now apparent with TV forecasts 1 & 2 days ahead changing towards our long range forecasts (12 weeks ahead for USA).

Our **NE USA 10-13th (esp 11-13th) snowstorm event** is confirmed in timing & region: WeatherAction 2 week ahead forecast, and Accuweather 2 day ahead, below. Although it may end up less snowy than we expected we must wait for full results in Report2.

Our UK 'torpedo' low 10-13th (esp 11-13th), forecast note below is being confirmed in timing and general track with standard Met increasing winds and putting the track further South forecast by forecast (eg **sub-low newly placed OVER Scotland** for11th 18:00 below). It will probably not track as far south as we first expected ~4 weeks ahead but details of further changes in standard short range forecasts should be closely watched and we will report further.
