

# Public test Solar-based long range forecasts “brilliant success”

- 3 month ahead public trial confirms power of Piers Corbyn’s ‘Solar-Lunar Action Technique’
- Of 6 detailed winter event forecasts Europe, USA + Australia success was 5/5 & one ‘not ran’

Example of Solar Action driving weather. Coronal Hole Jan9 <http://bit.ly/yM7s6L> implied (SLAT) main solar-Earth effect Jan10 - 13/14

Greg Koziol <http://www.youtube.com/user/GregKoziol> said: His prediction of DEC 15-17th being mild in Northern U.S.A. was accurate. I know because I live in this area, normally temps during the day should be about freezing, and they have been well above that.

The 6 extreme events winter warnings announced by Piers Corbyn on \*Oct 19<sup>th</sup> predicting extreme weather events in detail between 8 and 13 weeks ahead have been a “brilliant success”. “These predictions are a game-changer in forecasting and give business, forecasting bodies and governments across the world astounding potential to better prepare for extreme weather events and disasters of all kinds”. “These forecasts are solar-based and we can track predicted events on the sun (eg top right) to Earth’s weather. These events are nothing to do with CO2 changes which have no effect on weather or climate”, said Piers.

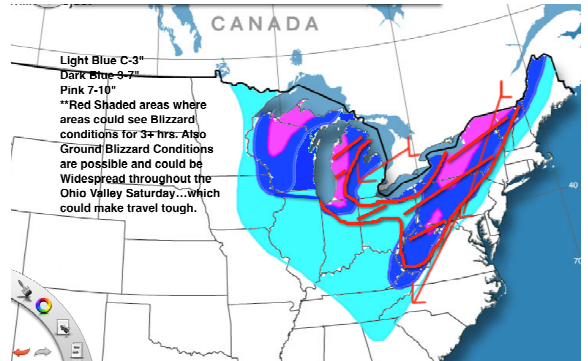

\*at the International ‘Congress of Brilliant Minds’ Madrid Oct 19 and put on Video on Oct 26 Climate Fools Day UK Parliament: <http://bit.ly/t6lCRR> (14,000+ hits) & <http://bit.ly/sUSVVH>

- The first forecast, for exceptional cold in Britain & West Europe Nov 27 to Dec 28, was withdrawn after a giant filament across the sun led to forecast revision – see <http://www.weatheraction.com/docs/WANews11No34.pdf> and VIDEO <http://bit.ly/rpy4ds> (over 5000 hits). “This was a ‘non-runner’ in racing parlance but it led us to tremendous scientific advance”, said Piers.
- The second – 8 weeks ahead - for an exceptionally mild spell 15-17 Dec North Central USA was well confirmed (up right).
- The third – 10 weeks ahead - for a contrasting exceptional cold blast 31 Dec into Jan NE USA gave ‘blinding snow squalls’ (right & <http://bit.ly/sXXsF8>)
- The fourth – 12 weeks ahead - for massive snowfalls ~11-14 Jan NE USA was well confirmed - map right <http://firsthandweather.com/blog/all-posts/wintry-precip-tonight-snow-thursaturday> & <http://www.weatheraction.com/docs/WANews12No3.pdf>
- The fifth – 13 weeks ahead - a damaging windstorm ~17-19 Jan NW USA was superbly confirmed by hurricane winds off coasts and the connected great Seattle blizzard-ice storm – Map Wed 18 Jan right & <http://www.weatheraction.com/docs/WANews12No4.pdf> , <http://bit.ly/wJ754Y> & <http://bit.ly/vtsJHQ>
- The sixth – 13 weeks ahead - a heatwave from ~18 Jan Adelaide region Australia is confirmed by temperatures rising for a few days and nearing 38C on 22 Jan when the normal max for the region is about 10C lower (See below). Interestingly there was also a heatwave early Jan - <http://bit.ly/sQKeL2> - in south parts of Australia. Like USA Australia has been showing a series of similar extremes in parts with opposite weather in other parts.

Further details of the USA events were also well described in the WeatherAction USA monthly maps forecasts and related Earthquake trials were also successful.

“Blinding snow squalls” at times in Pennsylvania (above) & Cincinnati Mon 2 Jan led to multiple car pile-ups – and confirmed ‘31 Dec into Jan WeatherAction cold blast’.
