

At the start of Solar Lunar Action Technique SLAT7.....

Earth-facing coronal hole triggers major quakes & weather activity as predicted

WeatherAction's prediction (Right) of Earth-facing coronal holes* to appear on the sun at the start of February and these to trigger both major earthquakes (probably in Southern Hemisphere) and significant weather front activity has been superbly confirmed. (*announced 27 Jan under new SLAT7)

1-3	R5+	V High	V High	QV Extra Major Earthquake & Major Volcano Earth facing Coronal Holes likely above centre of solar disc Quakes in range M6.5 to 8 likely. Pacific ring South Hemisphere possibly preferred.
-----	-----	--------	--------	--

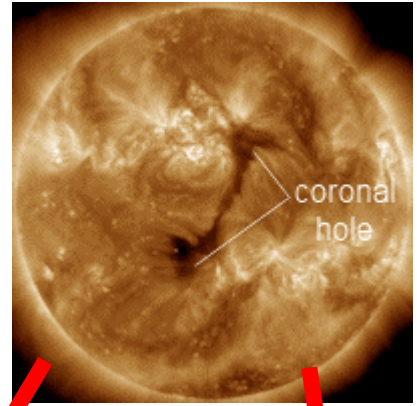

The coronal holes appeared on cue across the centre of the solar disc on Feb 1st – as reported by Spaceweather.com <http://bit.ly/xeJiVV>. A Major earthquake then hit Vanuatu, South Pacific on Feb 2nd (M7.1 – the largest in the world for 3 weeks) and many aftershocks followed. All quakes larger than M5 on Feb 2nd were in the Southern Hemisphere.

Significant weather events expected by WeatherAction – driven by the top level solar effects in our 'R5' Red warning - also appeared on cue such as an icy easterly blast in Italy in our Euromaps forecast and exacerbation of snow deluges in North New England USA.

Weather starts 93 million miles away not in a computer

Piers Corbyn, astrophysicist and originator of the Solar Lunar Action Technique which forms his forecasting process said: "This is a tremendous advance. The timing of the emergence and position of the Coronal Holes, the major quake and extreme weather events were all spot-on. It is clear that major quake events and weather extreme events and events such as Jet stream shifts are powered or triggered by solar activity – such as the fast solar wind emitted from Coronal holes."

Major thunder activity appeared across the USA on Feb 2nd eg in Texas and Oklahoma <http://bit.ly/xQQVCg>
 Right Accuweather report up to 9 inches heavy snow SW Canada /Nth New England <http://bit.ly/AjFfpW>

Deadly cold kills dozens across Europe January

- Major cold blast Jan 25-27th predicted by WeatherAction (R)
- BBC hardly reports the matter which contradicts their delusional warmist message.

Bucharest (rt) Jan 27 where temperatures dropped to minus 23 C in the preceding days http://sofaecho.com/2012/01/31/1756273_european-cold-spell-kills-more-than-50

In Ukraine 500 were treated for frost bite in late January.

Turkey and Greece were extremely cold and Sofia Bulgaria fell to minus 12C

Steam train Central Germany where Temps dropped to minus 13C around 30th January. <http://www.richtime.com/News/wspaper/World/2012/01/224311049519.html>

Euro-drama this Feb!

Join the supercold-watch show!
 "This is THE late winter of 2011/12" - Piers

"The weather crisis in Europe (see left, extract from WeatherAction new style Euro-maps Forecast for Feb) has been shamefully largely ignored by BBC broadcasts inside the UK. "Our forecast for Europe this Feb is very important because of the extremes involved. With our 'forecast behind all forecasts' ('RTQ' Red warnings & Quakes) and monitoring of Coronal Holes, solar ejections and earthquakes it will be a real Revelation to follow! We want to make that possible for anyone from normal users such as farmers to schools and groups of inquiring youth, whom we will keep informed."

So this FEB the RTQ forecast is included at no extra charge in the Europe maps Forecast box of Regionalized forecast details and Europe - North Atlantic Pressure scenario maps.
