Simultaneous Solar eruptions, Weather & Quake events track WeatherAction Top Red warning

The Feb 15th earth-facing coronal hole, the (officially) 'unexpected' K5 Geomagnetic storm (rt), the Oregon USA quake (rt) and the Auckland New Zealand water spout all appeared within hours of each other ~02:00 to 04:00 GMT 15 Feb - in the middle of our Solar Lunar Action Technique top ('R5') Quake warning period 14-16 Feb (above); details <http://bit.ly/yQI9Zm> SecIV.

The sun Feb 15. The important coronal hole is in the center although standard solar experts were more interested in the other.

Meanwhile in the corresponding R5 Top action weather period (~15-17/18th) standard Met Services have been desperately amending 3 day ahead forecasts in UK and USA, increasingly towards our WeatherAction 3 week ahead general view.

Anyone serious about weather needs WeatherAction forecasts

Piers Corbyn said "Although we had expected more sunspots this earth-facing coronal hole with major quakes is like our R5 period 1-3 Feb* which gave an M7.1 quake which as we predicted was in the South hemisphere whereas for this period we correctly warned the N Hemisphere would have more larger quakes. Predicting the timing *and* hemisphere of quakes is another advance. *<http://www.weatheraction.com/docs/WANews12No6.pdf> .

"For weather this month independent observers noted our SLAT7 long range forecasts and warnings of Met Office short range mis-estimations of snow amounts and timing errors have consistently outperformed TV forecasts. Important solar-lunar effects will continue to confound standard meteorology in the coming weeks"

OFF COAST OF OREGON
 2012 02 15 09:31:20 UTC 43.54N 127.98W Depth: 10.0 km

Earthquake Location
 Estimated Planetary K index (3 hour data) Begin: 2012 Feb 14 0000 UTC

Blizzards to blast UK & USA together!

Early winter snow Peak District 6 Dec

Over the weekend of 18th/19th Feb major solar-lunar driven snow/blizzard events are likely to hit Scotland and England* and NE USA at the same time.

WeatherAction long range forecasts predicted both while standard forecasts have dithered. "It looks like as our SLAT forecast of 3 weeks ago and the Met Office now admits that Arctic blasts of snow/blizzards will hit England and York at the same time as New England and New York" said Piers. * <http://www.dailymail.co.uk/news/article-2101649/UK-weather-Blizzards-head-Britain-swaps-Siberian-winds-Arctic-gales.html>

"Our Brit & Ire forecast is capturing the timing of events superbly. 3 weeks ahead we said the period 14-18th would be 'mild and suddenly cold later from ~18th'. This is spot-on. The coming snow in UK & USA ~18th will be heavier than standard short-range forecasts but later on 19/20th short range TV forecasts should be more reliable"

USA AccuWeather Michael G.

In NE USA there have been a series of 'near misses' for major snow / blizzards but "this one looks like coming" say Firsthandweather.com <http://bit.ly/xC6E3I> who produced the map (rt) of likely snow Sat18/Sun19 and will monitor options/ events on fb <http://on.fb.me/xMBob6>
