Atlantic Tropical Storms Forecast + News

Free public forecast available in WeatherAction pdfs news, relevant Comment blogs and in USA forecast box

● Formation well confirmed in dates and regions of WeatherAction's two periods so far. Reports: <http://www.weatheraction.com/docs/WANews13No36.pdf> & <http://bit.ly/18NUWQr> for 'WA1' => **Gabrielle**; <http://bit.ly/1eRTRgS> for 'WA2' => **Humberto FIRST Atlantic Hurricane of Season**

● Simultaneous ramp-ups of Tropical Cyclone* in WeatherAction Formation / Development periods well confirmed

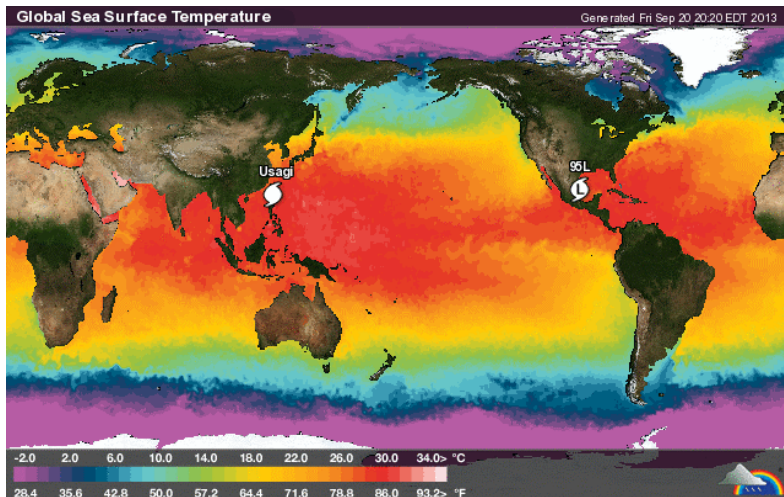

(*ie Atlantic/Carrib/ East Pacific Storms and West + Central Pacific Typhoons)

=> **Ramp-ups of ALL 5/5 active Cyclones in WA2 formation period** – see <http://bit.ly/1eRTRgS>

● Although warm seas indicate possibility of TC formation **only Weather Action Forecast periods can tell when & where*** (*for Atlantic proper storms).

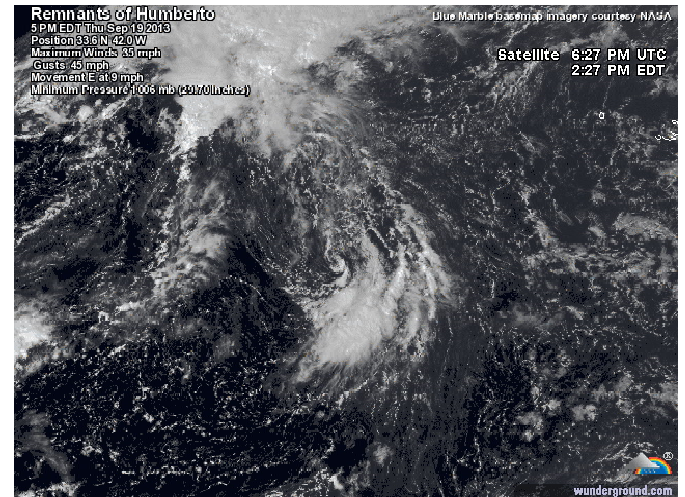

WORLD MAP OF Tropical Cyclone Activity

Forecast as first posted on WeatherAction Comment blogs 25Aug onwards.

Note (20Sep) Formation regions well confirmed but tracks only initially (unlike in 2011, subject for discussion <http://bit.ly/1eRTRgS>)

25 Aug WeatherAction Atlantic Tropical Storm/Hurricane Forecast under SLAT9A (ATS)

Note WeatherAction made excellent ATS predictions in 2011, eg forecasting **Irene** in detail from 12 weeks ahead:

<http://www.weatheraction.com/docs/WANews11No12.pdf> ; <http://www.weatheraction.com/docs/WANews11No13.pdf> ;

<http://www.weatheraction.com/docs/WANews11No14.pdf> ; <http://www.weatheraction.com/docs/WANews11No15.pdf> .

We issued no ATS forecasts for 2012

ATS Formations pending and likely tracks forecast 2013 issued 25 Aug 07.00 utc

Between now and End Sept WA expects 2 Hurricane formations and one TS of note (mainly because of its position), as follows (Each forecast has 85% prob of basic success):-

WA1 Forming ~29-30th Aug reaching H2 (+/-1) at some point. Prob starting East of Leeward Islands, heads W/NW towards near Bahamas, standard models are likely to suggest landfall on the Islands but WA1 will veer slightly right of their projections and stay in Atlantic and **HIT GEORGIA (or Florida/South Carolina)** around 6/7th (5-8th) Sept.

WA2 Forming ~13-15th Sept reaching H2 (+/-1) at some point, prob less strong than WA1. Prob starting East of Bahamas / Turks & Caicos, heads NW and **HITS NORTH (or South) CAROLINA** around 17th (16-18th) Sept.

WA3 Forming ~27-28th Sept TS not H. Prob starting East of North Carolina, heads NE in Atlantic towards Eire, UK and Europe.

Other TD/TS (poss H1) events are likely in this period but probably of less significance. These are forecasts of events - not events extracted from a wider forecast. This is a FREE public forecast and circulation / publishing is welcome WITH ACKNOWLEDGEMENT.
