WeatherAction Top Active period 11-14 Oct Extremes confirmed USA, Brit-Ire-Europe

- However Pressure patterns shifted in this uncertain "Mini Ice Age fingerprint" period
- Confidence increases for extreme dangerous weather both sides of Atlantic later in October

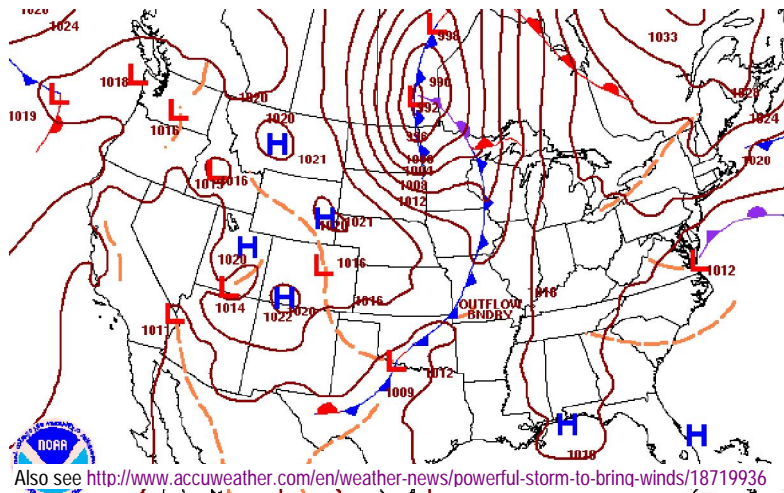

Piers Corbyn, astrophysicist and chief forecaster www.WeatherAction.com said: "We are pleased at the timely confirmation of our predicted rapid changes and extreme weather both sides of the Atlantic in 11-14th Oct major R periods, R4 11-12 & R5 13-14.

"However our C (65%) confidence meant we were unsure of the detail. So although our picture for USA, eg, is better anything standard meteorology had suggested in proper Long-Range - capturing main detail {eg heat SW USA, Low Mexico/ S California, High Florida, and Low Vancouver} the main cold blast in North USA started further West - see NOAA map Sat 12 Oct.

"For Britain+Ireland & near Europe colder weather and Active Lows came on time but in S/SE UK rather than North. This important difference makes a pattern more common in Mini-Ice-Ages and may be an indicator of things to hit more often in coming months and years.

"More immediately these events - forecast subscribers need to know - increase confidence of **DANGEROUS Major events Brit+Ire+Eu and USA FORECAST LATER THIS MONTH. We are making all forecasts for the rest of October HALF PRICE to help people get prepared.**"

USA Key Developments & Extremes Forecast OCTOBER 2013 - MAPS

Issued 30 Sept from SLAT 9A (USA). Web access to forecasts <http://www.weatheraction.com/wactmember.asp>

Get ready!

- Dangerous weather Later this October USA, Brit+Ire, Europe, World Extremes.
- Oct *forecasts all NOW HALF PRICE => <http://bit.ly/utWrvj> (*30d services)

Likely possible weather map scenario:
 Deep Atlantic Low attacks Britain + Ireland from W/NW and Scandinavia High retreats partially. Biscay/West Iberia Low. Deep thundery lows central/W Med/Gulf of Genoa + Greece/Turkey. Jet Stream: Split, N branch moves South.

Above C (65%) confidence scenario 11-14th Br+Ire+Eu. There were deep Lows & Jet Stream split but action in South/SE UK took-over. Forecasts look like being on track Eu+US from next weather period.
