

(WA13No44c) Forecasts & further discussion www.WeatherAction.com and Latest / Comments +442079399946 / +447908734296

* **"The Piers Corbyn Storm"** say WeatherAction forecast users – see Reader Comms <http://bit.ly/19rwAPN>

THIRD information Comment Issued 27 Oct 06.30 GMT Re storm - forecast issued 17 Sept, 6weeks ahead
Thanks v much to all users for superb COMMS on site. Further comms twitter / Facebook, WeatherAction Comms, other, v welcome.

3rd Comm (27Oct early morning) THE "END GAME" Track of OUR "THE BIG ONE" in R5 27-30th

YES! LATEST STANDARD Model Sun 27th 0z Confirms Weather-Action shift of storm centre track somewhat South (+ moving faster)

- AS shown in previous information Storm Centre positions in SouthWest approaches were very similar in WeatherAction 6 week ahead and MetO 2day ahead

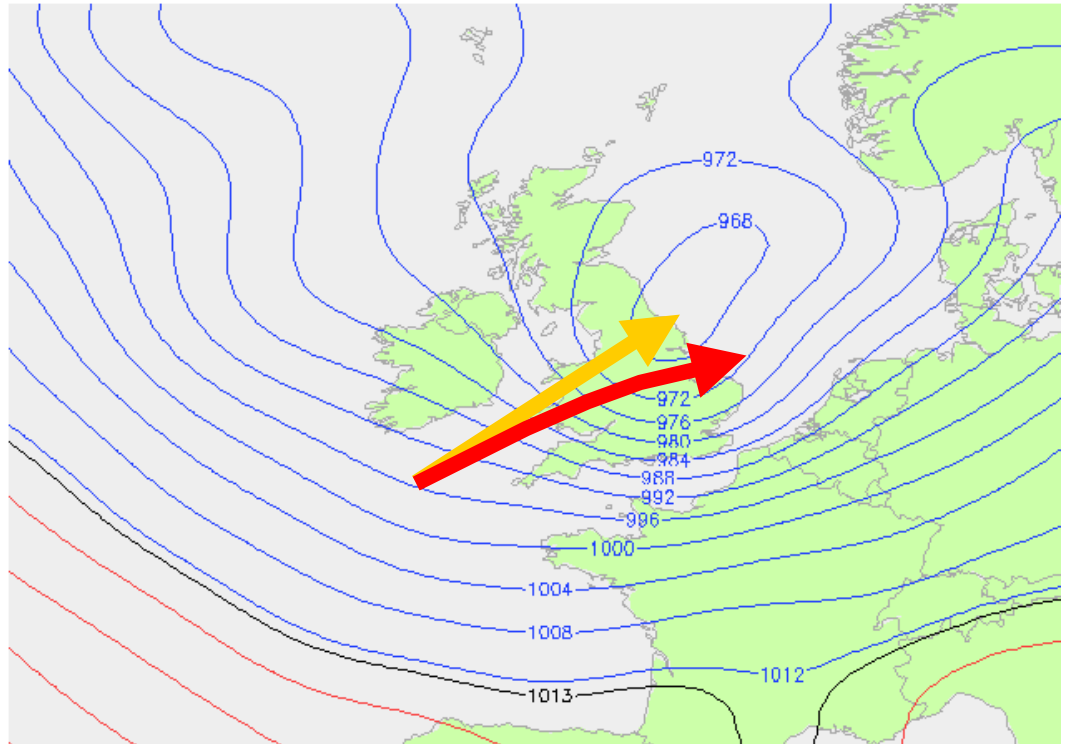

- WeatherAction 2nd update information (issued 26th 04.30) stated Storm Centre positions would likely shift south from **Yellow track** to **Red** during R5 period (27-30th) – copied as below

The **yellow line** shows MO model storm centre track to Mon 28th 12 noon possibility and our **red arrow** shows how such would likely be perturbed by the R5. This is **one** likely trial option for research purposes and interest – the differences could be more or less.

We notice over the last few days the MO warnings of top wind strengths has increased **whereas WeatherAction SLAT9A (Solar-Lunar-Action-Technique)** said - one forecast only from 6 weeks ago - **severe gale & storm force winds in Ireland, S/W Britain+ N/W France with high likelihood of some tornadoes during 27-30th and "Extremely DANGEROUS" seas**

We did not say then if that meant storm 10 or 11 and now say **STORM FORCE 11 IS LIKELY ON LAND IN PLACES which given the tornado risk can mean Hurricane 12 as well and with the wider coverage track of this storm puts this total storm damage on a par with the Great Storm of Oct 15 1987, 26 yrs ago.**

Thank you. Piers Corbyn

@weatheronline.co.uk

LOOK! (27th 09:00)

- New Model track has shifted SOMEWHAT SOUTH – End Game trial CONFIRMING**

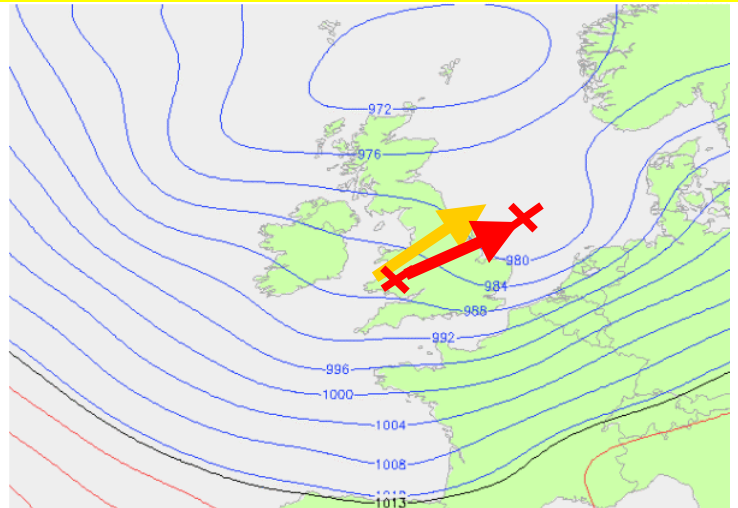

- Expect More shift South, ~Anglia & winds STRONGER (close to but prob less than '87)**

Surface Pressure GFS (hPa)

Mon 28/10/13 06UTC (Sun 00+30)

@weatheronline.co.uk

- Expect Top gusts ~ 90mph+ (Storm 11 & near Hurricane 12) [+ more in local tornadoes England & France] rather than Standard Met up to 80mph" says Piers**
