

# Piers' late Oct storms both sides Atlantic

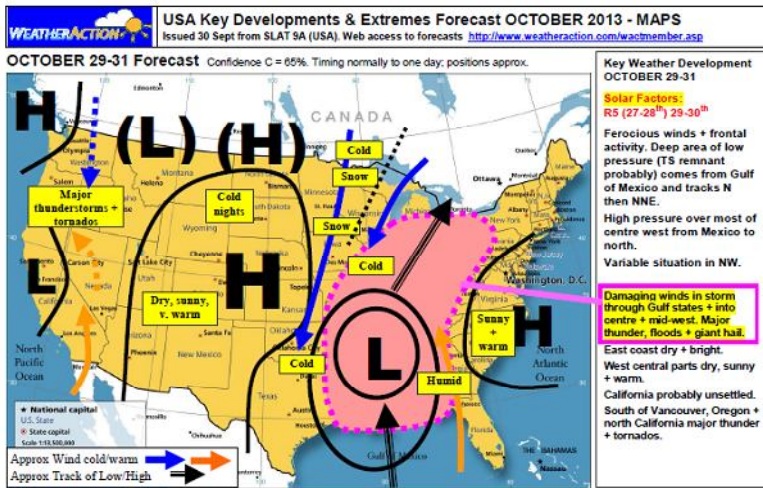

**Piers Corbyn's Storm\* 28 Oct 2013 in Britain, Ireland and NW Europe, predicted 6 weeks ahead, and ~simultaneous extreme storm events specifically predicted for USA** and associated storms across the world were preceded by extreme solar activity - remarkable for its strength and magnetic interconnectedness on 25<sup>th</sup> & 26<sup>th</sup> Oct. (see solar movie via <http://bit.ly/16KQnWY> (\*named by acclaim of WeatherAction forecast users).

This super-large scale series of solar events and associated activity had a major ionospheric impact\*\* and drove our WeatherAction prolonged Top Red (**R5**) weather period 27-30 Oct, **Piers Corbyn's Severe Storm of Oct 28** and the Severe South Central USA storms ~29-30<sup>th</sup>. (\*\* Rather like the solar eruption which disturbed the ionosphere, moved the Jet Stream 15 Aug 2010 and ended the W Russian Heatwave <http://www.weatheraction.com/docs/WANews13No43.pdf> slides 17-19)

“The **R5** carried waves of extremes” said Piers. “The Storm ramped up in the Low countries, Denmark & beyond (+29<sup>th</sup>) which with destruction in UK confirmed our warned ‘damage on a par with The Great Storm 16 Oct 1987’ despite as we expected UK winds mostly not reaching such levels”.

Everything Piers Corbyn warned about his UK-Euro storm from 6 weeks to 6 hours ahead was confirmed while UK MetO knew nothing or dithered - **underestimated & failed to issue enough Red Warnings.**

## WeatherAction USA South-Central Severe storm “Brilliant hit”

“Our well-forecast, somewhat unusual, South-Central USA, North moving large severe Storm system in the same **R5** period as the Euro severe storm is important” says Piers Corbyn astrophysicist of [www.WeatherAction.com](http://www.WeatherAction.com) .

See [http://www.hpc.ncep.noaa.gov/basicwx/94fwbqus\\_loop.gif](http://www.hpc.ncep.noaa.gov/basicwx/94fwbqus_loop.gif) , <http://www.accuweather.com/en/weather-news/storms-to-return-midweek-for-d/19317411>

“Getting detail like severe damaging winds and hail for E Texas & Oklahoma and near Gulf / SE States from 4 weeks ahead to within a day, alongside Br+Ir(+Eu) 6 week ahead forecasts is great.”

**“It means we can soon extend USA forecasting to MONTHS ahead with no loss in accuracy”**
