

STORMS batter Ireland, Scotland, N England +NW Eu

- WeatherAction 3 week ahead STORM force winds warning confirmed.
- MetO underestimated winds - failed to issue **Red** warnings!

Earth-Facing Coronal Hole ~4Dec, WeatherAction forecast map for STORM winds prod 14 Nov (Rt) WeatherAction forecast poss Press and MetO 0z5Dec OBS (far Rt)

1-7 December 2013 A = 85%

Wet and windy – stormy with damaging winds in Scotland – and mild. A double whammy stormy period, with strongest wind ~2-3rd (largely SW'ly) and 6-7th (more W/NW or cyclonic west). Less mild/cooler later. Less wet and windy in south/east. Same as 45d.

Wet + windy. sev gales + storm force 10/11 at sea/coasts espec 2-3rd + 6-7th. Floods, thunder, hail + wind damage. Mild, cooler later

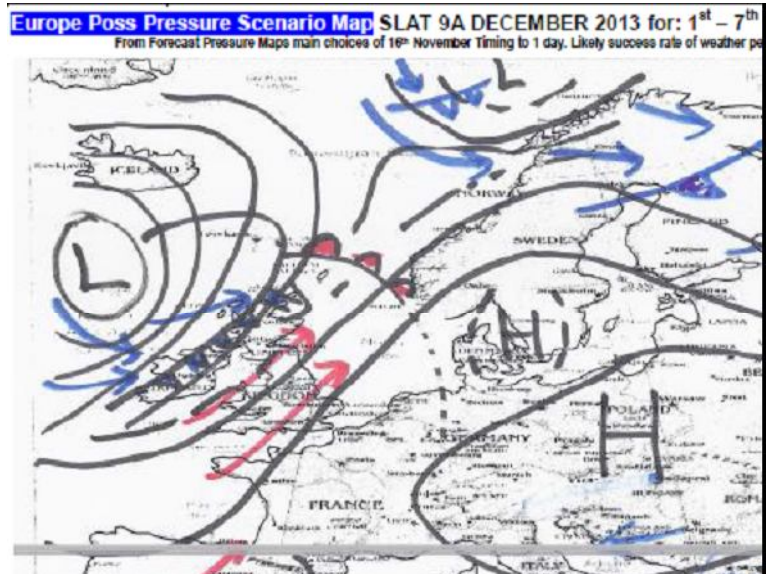

Wet + windy with gales, espec later. Mild, cooler later

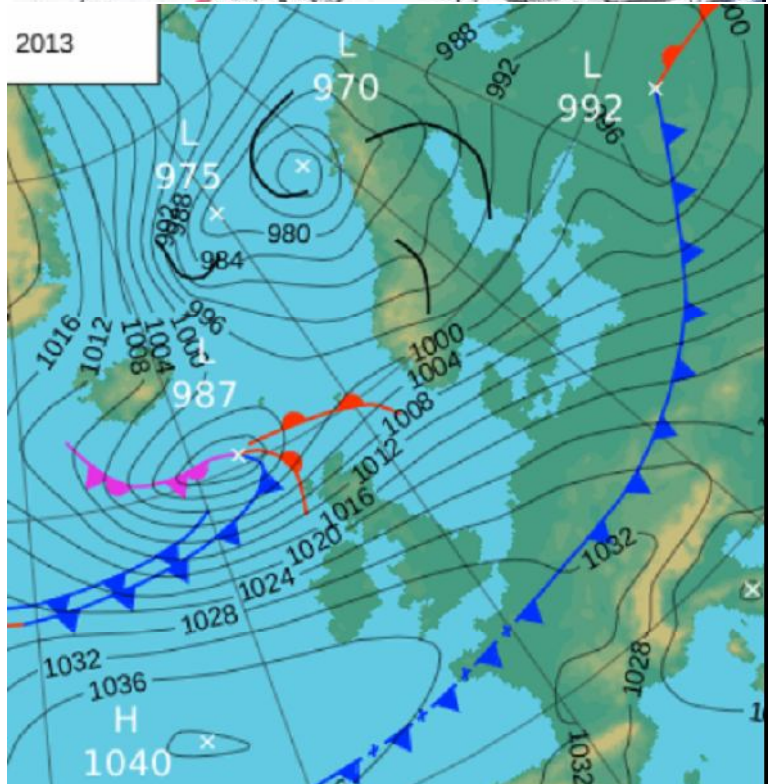

Wet + windy. Mostly cloudy/broken skies. Brighter 4isth. Mild, cooler later

Ch Isles

Winds: SW'ly, sev gale/storm in Scot/NI bec cyclonic/NW gales.

Teamwork in the Northern Storm of 5 Dec. Floods in the seaside resort New Brighton on the Wirral in Merseyside after high winds at high tide on the coastal road. THE massive deadly storm which smashed into N Ireland, Scotland, N England and on into S Scandinavia and the Low countries 5th & 6th Dec was another impressive “spot-on”, within normal uncertainties, vindication of WeatherAction’s solar-based Long-Range forecasting method and again found the Met Office’s Standard Meteorology unable to adequately grasp or warn of the power of another horrendous weather event. *Comms <http://bit.ly/lfsQaV> .

WeatherAction warned subscribers three weeks ahead of this Storm force 10/11 event which would obviously necessitate Red warnings and widespread banning of high-sided, or indeed ALL, vehicles from roads. The excellent and tragic pictures in the Daily Mail – link above - show the deadly consequences of Met Office weakness. Piers Corbyn, astrophysicist of WeatherAction said: “Preparations for this storm should have begun with Railways, roads, factories, offices and homes weeks ahead not as it was upon us. As Craig’s careful analysis (Reader Comm via link above) suggests the public should be shocked that with all their massive tax-payer funded computing power and graphical skills the MetO–BBC did not see this event sooner and failed to issue **Red warnings**. In fact of course no amount of computing power can improve standard meteorology. The long range forecasting and critical warnings of storm intensification (**R5 and R4 periods**) we do at WeatherAction – which gave a 23 week ahead warning of our 28-29 October Severe storm (same link) for example, which the MetO also under-warned (<http://www.weatheraction.com/docs/WANews13No46.pdf>) uses predictable aspects of Solar Activity [note that Earth-Facing Coronal hole] – and lunar modulations”.

~ 60yr Solar-Lunar Beat Cycle of Weather types appears again

This successful science runs counter to the BBC-MetO CO2 warmist con which they put before their duty of care of public. The MetO-BBC explanation by innuendo for extremes is of course “It’s CO2” and they think the further back comparable events the stronger their case. However comparing this with 1953 events gives support to the general ~60yr solar-lunar beat cycle of similar types of weather predicted by Piers Corbyn’s Solar Lunar Action Technique.
