

This is <http://www.weatheraction.com/docs/WANews14No19.pdf> 19-21st Q, then 22-24th R4 (periods chosen 14 April)

Eu Heatwave & breakdown in WeatherAction EuroMaps “Great Call”

▪ Euro Heat 19-21May followed by thundery breakdown in Major **Red** (solar-weather impact), **R4, period** impressively confirmed

MAY 2014 for: 19th – 21st May Confidence: B = 75%
Apr. Timing to 1 day. Likely success rate of weather periods is 8 or 9 basically successful out of every 10

The European heatwave giving temps of 31C in Munich (pic) & Moscow on 21May, and corresponding great weather in Britain & Ireland impressively confirmed WeatherAction’s forecast calls for Eu (above) and B+I made from detailed choices mid-April.

Piers Corbyn WeatherAction astrophysicist and forecaster said: “In REAL Climate Change terms the important point about this hot weather which extended a long way North - and its *rapid* breakdown and the preceding Balkan floods - is they are PREDICTABLE extreme consequences of the Wild Jet Stream (Mini-Ice-Age) era we are now in. They are nothing whatsoever to do with CO2 (see <http://www.weatheraction.com/docs/WANews14No17.pdf>).

“The media hype from BBC-MetO, Al-Jazeera and New York Times that all these extremes (including the **supercold** winter for most of USA!) are somehow a result of man-made CO2 ‘**Global Warming**’/Climate Change is a politically motivated lie and they know it. The extreme meanders and rapid switching of the Jet stream is a known and predicted consequence of the Mini-Ice-Age (called such because on *average* it is cold) type circulation the world has entered. UN-IPCC researchers and BBC-Met Office Charlatans admit the wild jet stream does NOT follow from CO2 models. However it DOES follow directly from our Solar Activity driven approach. **The IPCC-BBC-MetO-AJ just make-up their claims.** They can predict nothing in long range and defend their Science-Denialism ahead of improving preparedness against weather disasters for which WeatherAction leads the world.
