

WeatherAction Major SolarActivity-EarthWeather, R4, period 18-20 June dramatically confirmed - Fearsome Thunder+Tornadoes trash Mid-West+More

On WeatherAction cue from 3 weeks ahead

As predicted in detail from 3 weeks ahead the WeatherAction R4 period gave major increases in Solar activity – Earth effect with significant increases in Solar wind density & speed, a sudden K5 Geomagnetic storm (above) & more Auroras.

Awesome ‘Shelf’ thunder Cloud Ohio Left; Tornado & thunder short range Met expectation map Rt.

Piers Corbyn, Weather-Action: “We are very pleased with the dramatic confirmation on cue of our 3wk ahead USA forecast for widespread extreme storms / tornadoes+hail, largely in the approx areas we forecast - driven by solar wind / electrical effects.
