

Major (R4) Solar-Weather world impact period June 18-20 dramatically confirmed

World Geomagnetic Activity confirms WeatherAction **R4** period **June 18-20**

From Data site <http://www.swpc.noaa.gov/alerts/k-index.html>

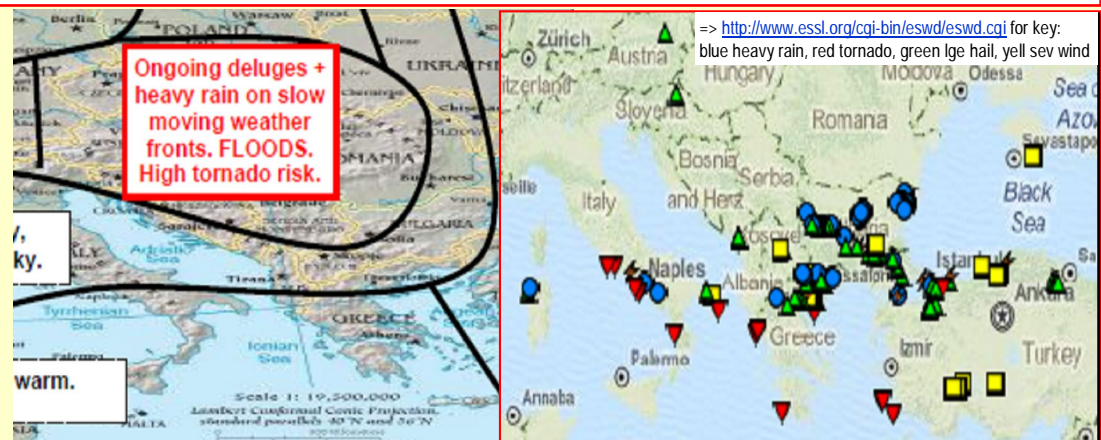

Deadly floods, thunder, hail & tornadoes hit Bulgaria + S/E Europe in line with WeatherAction detailed forecast period + approx region
Forecast Map extract & Extreme events OBS in same period Gmt below.

In the same R4 Jun 18-20 similar deadly deluges, thunder & tornadoes hit parts of USA also forecast by WeatherAction: <http://www.weatheraction.com/docs/WANews14No22.pdf>

“More major storms & floods will hit the Balkans & other parts of Europe this Summer & Autumn”, warns Piers Corbyn of WeatherAction. “They are driven by predictable changes in solar activity and sun-earth connections and intensified by the Wild-Jet-Stream (Mini-Ice-Age) state the world has begun. Some will be deadly. They are nothing whatsoever to do with CO2. **Details are available now in our LongRange forecasts issued months ahead. Preparations must be made”**

On WeatherAction cue of 3 weeks ahead
As predicted in detail from 3 weeks ahead the WeatherAction **R4** period gave major increases in Solar activity – Earth effect:- increases in solar events, significant increases in Solar wind speed & density, a sudden **K5** Geomagnetic storm & more Auroras.
