USA Key Developments & Extremes Forecast AUGUST 2014 - MAPS

Issued 31 July from SLAT 10 (USA). Web access to forecasts <http://www.weatheraction.com/wactmember.asp>

AUGUST 25-29 Forecast Confidence A = 85%. Timing normally to one day; positions approximate.

Key Weather Development AUGUST 25 - 29

Solar Factors:

R4 25-26; R5 27-29

Sudden rapid intensification of activity in very long jet stream stretches.

Large area High pressure from NE + Great Lakes to East Texas + Gulf + Florida.

High pressure NW.

Low pressure sandwich over Mexico + Rockies.

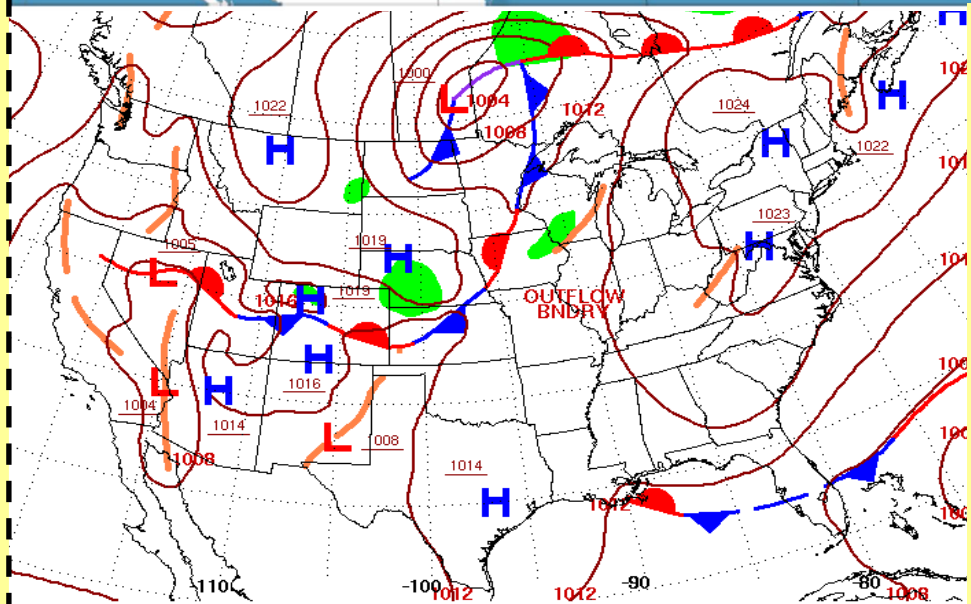

Whole of N/E + South mostly dry + hot + sunny but with high cloud. Intense isolated sudden thunderstorms with giant dangerous hail.

SW USA TX, NM, AZ, CO, extreme heat. Extreme danger of intense wildfires in generally dust storm + isolated thunder + tornadoes situation.

South California probably some showers, coolish + cloudy.

NW (not far NW) major thunderstorms + large hail + generally cool.

North of West USA major thunderstorms + hail outbreaks.

Surface Weather Map at 7:00 A.M. E.S.T.
