Key Weather Development SEPTEMBER 1-5

Solar Factors:

R5 1-3, R4 4-5
The rain, thunder, hail and tomado events in the first few days of Sept (esp 1-3rd) will be more severe than standard forecasts will say from a few days ahead.
Active low pressure in central parts moves N/NE.
High pressure in East/Florida.
Active low far NE USA.
General high pressure off NW.

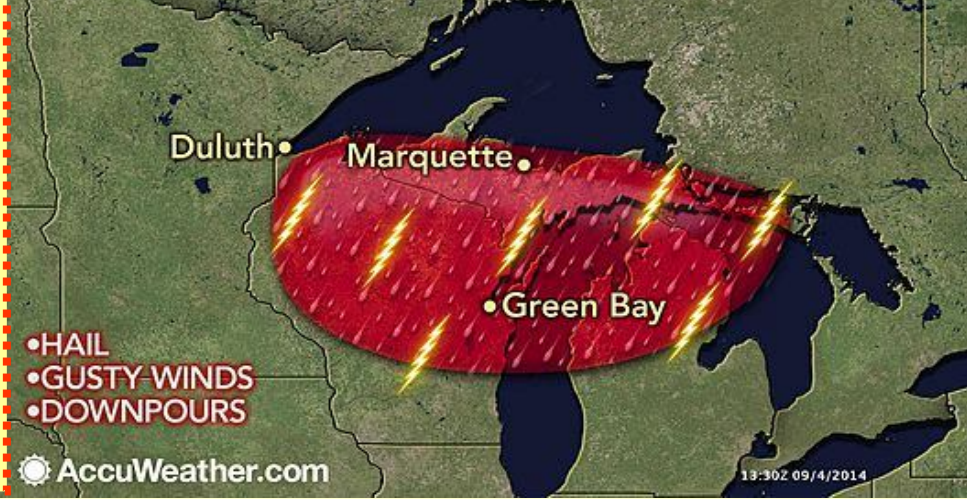

Major thunderstorms, flash floods, tonadoes, giant hail in Great Lakes, North parts Mid West and NE USA.

• This **R5+R4** 'DoubleTopR' period 1-5 Sept, predicted months ahead by WeatherAction was confirmed by increased SolarActivity, extreme weather events in other parts of USA and the world and significant extra Quake-Volcano activity. SEE <http://linkis.com/bit.ly/V5Pno>

WARNING

Another, **DANGEROUS**, 'Double-Top-R' period this month will give even **more extreme** events across USA & the World.

SEVERE T-STORM RISK THURSDAY-THURSDAY NIGHT

Above, WeatherAction forecast Extract of 29 Aug

Left, AccuWeather warning for ~4 Sept. <http://www.accuweather.com/en/weather-news/storms-to-disrupt-travel-plans/33440119>

The system moved ~East further into region on WeatherAction Map

• These severe events and many others around USA confirmed WeatherAction warning that events would be **more severe** than Standard forecasts would expect from a few days ahead.
