Standard Met Models (Left) (ECMWF= European Centre for Medium Range Forecasting)
5-6d ahead now agree with **Weather Action 18d ahead** (below)

WEATHERACTION USA Key Developments & Extremes Forecast DECEMBER 2014 - MAPS
Prod 20 (circa 30Nov) Nov from SLAT 11 (USA). Web access to forecasts <http://www.weatheraction.com/wactmember.asp>

DECEMBER 5-8 Forecast Confidence A = 85%. **Timing normally to one day, positions approximate.**

Key Weather Development DECEMBER 5-8

Solar Factors:
R4 5-6; R5 7-8
Ferocious Nor Easter storm tracks up East Seaboard. Higher pressure (variable) Great Lakes moves East followed by low from West in a mobile manner. Low Mexico/SW. Variable pressure on West coast.

Major hail, tornadoes, thunderstorms and floods in SE USA as deep low moves NE along coast.

Turning to sleet and then massive blizzards and thundersnow with transport at TOTAL SHUTDOWN in East + NE and most of Midwest later.

Texas/SW quite warm with rain & thunderstorms.

Rockies +center-West heavy snow + thundersnow in North, thunderstorms + tornado developments in South.

South California + West coast showers + mildish.

Pacific NW variable/mildish at times with rain/sleet/snow showers (further inland).
