

JANUARY 5-7 Forecast Confidence AB = 80%. **Timing normally to one day; positions approximate.**

Key Weather Development JANUARY 5-7

Solar Factors:
NSF 5-7
 Turning quieter & less windy
 Cold high pressure centred over North of West USA generally shrinks as Mexico low moves North and shallow low develops on Eastern seaboard.
 Quite active low far NE.
 Light powdery snow far NE USA.

Great Lakes + most of Midwest heavy sticky snow.

SE (NC/SC, GA, parts Florida) becoming showery, mostly cloudy, quite mild.
 Sleet/rain boundary moves north.
 Gulf states mostly mild with a few showers, variable sky.
 SW (TX, NM, AZ) very mild, some showers possible, variable sky.
 South California probably mild & dry with variable sky.
 West/NW coast dry, Vancouver bright.
 North of centre West and centre USA cold, dry, very sharp fronts, foggy mornings, bright afternoons in most parts.

VERY COLD BLAST ~6-8 Jan well forecast! BEWARE OF NEXT PERIOD!

Frigid Arctic Blast

Tuesday PM - Thursday AM
