## Key Weather Development APRIL 26-28

### Solar Factors

R4 26-28<sup>th</sup>

Large scale active pressure systems take over. Lowpressure moves to NE & a firm high builds in central USA. Lowpressure in most of West half of USA.

NE cold and showery- wintry in Canada + far NE/NNE

SE cool + showery.

Florida mostly dry, variable sky. Central USA from Gulf Coast to North (West of Great Lakes) becoming dry + mostly sunny.

East Rockies fantastic weather

Piers Corbyn  
astrophysicist and  
Director of  
WeatherAction  
USA says: "This  
weather scenario  
is an important  
confirmation of our  
WeatherAction  
Solar-Lunar-  
Action-Technique  
– now newly  
advanced to  
SLAT12.

It is enabling us to  
produce longer  
ahead forecasts of  
even greater skill.
