## Weather Period 26-29 June

# Glastonbury, Wimbledon: deluges with thunder & hail likely espec during 27-28th

- Increased tornado risk in most of South & SW England

**Superb!** commented WeatherAction forecast users on comparing WeatherAction forecast map 21-25 June with MetO Obs-Analysis chart (above right). The MetO and their CO2 theory say "This can't be done" Note the maps are different projections but key pressure features are similar.

### "SPOT-ON!" say WeatherAction Europe forecast users.

- 'MidSummer snow in the Land of the Midnight Sun' confirmed

On [www.WeatherAction.com](http://www.WeatherAction.com) Public COMMENT blog 24 Jun 2014, Saskia Steinhorst (Neth. sub.): "SPOT ON wrt snow in Summer in Scandinavia, Piers! It explains that cold 'under-current' I've been speaking of the last week or so, as the wind has been predominantly coming from NW-NE in our region. I'm increasingly convinced our region is more under the influence of patterns near Scandinavia...."

This is the essence of WeatherAction long range 6 week ahead detailed forecast (unchanged at 4 weeks ahead) for Britain & Ireland as applied to The Glastonbury Festival and Wimbledon Tennis 26-29th, especially Frid 27<sup>th</sup> & Sat 28<sup>th</sup> which is the later part of WeatherAction 'Top Red' (R5) Solar Effect impact period 26-29th.

The R5 period means greatly enhanced rain, thunderstorms, locally strong damaging winds and hail (and increased tornado / funnel cloud risk) 26-28<sup>th</sup>. Any TV forecasts 1 to 1/2 day ahead will need to have rainfall forecasts doubled and the risk of thunder, hail and tornadoes / funnel clouds – anywhere in the wider areas - substantially increased both for Glastonbury and for Wimbledon where extreme deluges are likely probably half a day later than those for Glastonbury.

Sun 29<sup>th</sup> June will be less wet and probably brighter than 27-28<sup>th</sup>, in both Glastonbury and Wimbledon SW London areas.

## World Cup Brazil weather Top Tips

FIXTURE INFO <http://www.belfasttelegraph.co.uk/sport/football/world-cup/world-cup-2014-guide-to-groups-fixtures-and-dates-29818488.html>

Standard Met Pressure map (GFS) forecasts are available:

<http://www.weatheronline.co.uk/cgi-bin/expertcharts?LANG=en&MENU=0000000000&CONT=suat&MODELL=gfs&MODELLTYP=1&BASE=-&VAR=pslv&HH=36&ZOOM=0&ARCHIV=0&RES=0&WMO=&PERIOD=>

When looking at these or any forecasts remember in the S Hemisphere winds go around High & Low pressure areas the other way to The N hemisphere.

When you have a forecast from any source you can modify humidity and thunder risk using the WeatherAction R factors. Make substantial increases in humidity and rain / thunder risk during R5 or R4 periods.

Important R periods in World Cup period are, with dates +/-1d:

JUN 26-28, R5. JUL: 2-3 R4, 9-10 R4, 11-12 R5 (note R5 11-12th just before final. There could be late effects)
