

# MAY 2014 - for R & QV See page 2 for RTQ Forecast data Table

Circulated 3 MAY reproducing R periods and values already released (& QV implied, see p2) in Br+lr 45d forecast of 14 APR forecast for MAY.

## UN Climate IPCC(SD) - Panel for Science Denial

This article is as in [pic.twitter.com/8vrHYbQNO5](http://pic.twitter.com/8vrHYbQNO5) = <http://www.weatheraction.com/docs/WANews14No11.pdf>

“The latest Climate Alarmism (April 13) from the UN IPCC\*\* marks a new low in Science Denialism and desecration of the scientific method so we are re-naming the UN Panel for Climate Change the **Panel for Science Denial, IPSD**”, said Piers Corbyn of WeatherAction.

Their dire warning of world warming while it gets colder and their call for more switching to gas from coal – which is a bright Green Light to Russian militarism and gas-blackmail of Europe; rest on two premises:-

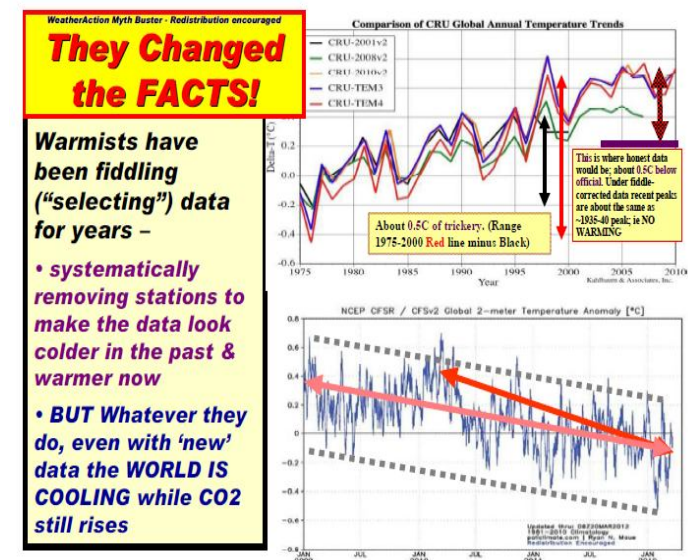

1. That in the present real world increases in the trace gas CO<sub>2</sub> (0.04% of air) cause warming and climate change.
2. That even if this were true Man's only 4% contribution of total CO<sub>2</sub>/ 'greenhouse' gases dominates and nature's 96% conspires that all other CO<sub>2</sub> etc from termites (10x that of Man), volcanoes, rotting plants, cow-fart etc stay constant as a whole, leaving Man's 4% in charge.

**BOTH propositions are deranged.** All objective data measurements show CO<sub>2</sub> has no effect and indeed sea temperature over time controls CO<sub>2</sub> levels – the opposite of CO<sub>2</sub> warmist sect claims. The idea that the whole of nature's CO<sub>2</sub> stays constant while it has shown wild swings in the past - 2500 x Man's present input - is **insane**.

### POTSDAM INSTITUTE CHALLENGED

“If the **Potsdam Institute** which host the production of this deluded nonsense has a milligram of scientific integrity it must reject the scientific cretinism imposed on it by the UN's IPCC\*\* and German Govt, remove the responsible charlatan 'scientists' from its remit and refuse to give scientific credibility to Lies which was the role of science under a previous German Govt, that of Adolf Hitler. There is now an historic choice for Science and policies across the world: Evidence-based Science Vs Creeping Eco-fascist science-denialist theft from the public for the CO<sub>2</sub> warmist project which slams up energy and food prices and is ruining the world economy.

\*\* Intergovernmental Panel for Climate Change – WorkingGroup III, support hosted by Potsdam Institute for Climate Impact Research, funded by German Govt. ## More Tornado swarms in Mini-Ice-Age warns Piers

“It has been noted that contrary to the baseless alarmist claims of CO<sub>2</sub>warmist ScienceDeniers the number of intense tornadoes in USA has fallen over recent decades so a fair question must be what will happen to tornado and severe thunderstorm / storms frequency in the developing Mini-Ice-Age - the reality of which is shown by WeatherAction's continued confirmed forecasts. I suggest (points I have mostly made before):-

1. **Very extreme temperate zone storms** will become more frequent as we go further into MIA. Historically the biggest storms (eg The Tempest of 1703) occurred during LIA-MIA periods or at their boundaries. NB CO<sub>2</sub>Warmists claim warm=> storms has no observed basis in reality, they just made it up.
2. **Very extreme thunder, hail and probably extreme tornadoes**, will also increase in frequency. The thunder and extreme hail increase is observed fact in MIAs.
3. Tornado data is insufficient in the past to judge fully what happened in MIAs but more would follow from thunder and hail events. The under-rated **electrical nature** (see my Electric Universe Presentation) of many weather extremes and the electrical contrasty nature of MIAs also suggest this. See [bit.ly/1u319Z2](http://bit.ly/1u319Z2)

# RTQ MAY 2014 Forecast & News - p2 Forecast Periods to -1 day.

Red Warnings, Thunder/Tornado Risk & Major Earthquake/Volcanism Trial Risk  
 • With quake-volcano trial forecast clarifications. Note R or QV periods separated by 1d can 'merge'

Circulated 3 MAY Reproducing R periods and values already first issued in Br+lr 45d forecast of 14 APR for MAY

**Red Weather periods, R**, – are standardized **R1 to R5** (most extreme effect) in WeatherAction Solar Lunar Action Technique. They indicate Solar-Lunar drivers of thunderstorm and related extreme events around the world. Extreme weather event risk periods such as thunder/tornado (espec USA) development & potential Tropical Storm Formation and development periods (Cyclogenesis) are consequences of these drivers and are also periods in which standard meteorology models will notably underestimate strength of deluges, thunder, snow etc in forecasts from a day or so ahead. In these periods typically standard meteorology forecast (smf) estimates of rain/snow from a day or so ahead need to be doubled (or more for **R5**). **Dates UTC** (GMT) for estimation although there are uncertainties. Forecast Maps & detailed forecasts with corresponding specific likely weather events are issued for various parts of the world. Lesser extremes ('Extra Activity') & 'Quiet periods' + likely weather scenarios are stated there.

**Major Earthquake – Volcano Trial Risk Periods, QV**, are in similar 1-5 categories as R periods, **but need not be the same as R**. **QV** Periods are largely similar to Red warning weather periods and are not specific to any particular Earthquake prone region or location. The largest Quake/volcano activity in term of intensity and prevalence (av per day) is expected in **QV5** and **QV4** periods and should include more **M6+** quakes. **QV3** may include M6+ and **QV1-2** are less likely to have such but should have some extra activity. (Nb qv notation discontinued). Some preferred earth hemispheres for major quakes are also given. **M6.0 & above earthquakes are marked Red in US Geological Survey**  
<http://earthquake.usgs.gov/earthquakes/eqinthenews/> M6.0 is a convention. Other levels (eg M5.7+, M6.5+, M7+) may help. Results best obtained via <http://earthquake.usgs.gov/earthquakes/eqarchives/epic/> **WeatherAction Research is ongoing**

**RTQ Forecast Table MAY 2014** R periods first produced 14 APR in B+I 45d. **QVs** all through **MAY** same as correspondence in **APRIL** RTQ forecast in timing with Value as **R** except if amended and additions when new **Rs**, typos excepted.

There are continuing interesting concentrations of **Top Red, R5, R4** & Quakes Risk **QV5, QV4** and solar activity this month and overall more activity than last month.

Date MAY 2014	Solar Lunar Factor Red Weather Warning	Extreme Weather Events Thunder / Tornado   Cyclogenesis		Date MAY 2014	Major Earthquake + Volcano <b>Trial</b> Risk <b>QV4, QV5 Tested by M6+. In R5 M6.5+ likelihood increases.</b> QV trial forecasts under <b>SLAT9BQV</b>
